SAFETY & SERVICE

The Future Before Us

America has learned her strength. The energies that were organized so quickly for war will now be turned to better farming, better manufacturing, better transportation—and to new markets abroad.

We have reached new levels in efficiency and thrift. The new period in the world's history will be momentous for all of us. We must lead in supplying the needs and restoring the faith of the war devastated countries.

This institution desires to express confidence in the future which lies before the American people.
