Do You Know That Hudson Builds the Essex.
That fact has not been generally known. But Essex did not need Hudson's endorsement, as is proved by the sales record it has made. More than 29,000 Essex cars, exceeding \$35,000,000 in value, were bought in the first eleven months.

There was no need to use Hudson's reputation as the world's largest builders of fine cars to give endorsement to the Essex. The kinship of the two cars was purposely concealed so that the Essex might develop its own position on merit alone.

We tell you of that kinship now that you may understand why the Essex is a superior light car. The engineers who developed the famous long distance enduring Hudson Super-Six put all their skill into the design of the Essex. Both cars are built by the same workmen. But one standard is known to Hudson, and it applies to both the Super-Six and the Essex.

That is why Essex is the success it is, why its performance is praised by all who know it. Come take a ride in the Essex if you would know the car of the future. Vaughn & Sons are the local dealers.

POLITICAL PARAGRAPHS

In order that industrial production in the United States may be fully protected from an inundation of foreign cheaper-made goods, Representative Joseph W. Fordney, of Michigan, chairman of the House Committee on Ways and Means, has introduced a bill which is calculated to prevent unfair competition. He provides that if any American manufacturer has an interest in or controls a plant in Europe which produces goods similar to those he turns out here and sells them in the American market at a lower price, he will be charged not only the ordinary import duty upon such goods, but the entire difference in price which he would have received if manufactured in this country.

No child hereafter born in the United States of foreign parentage will be eligible to citizenship unless both parents are eligible to become citizens, if a joint resolution introduced in the House by Representative Baker, of California, is enacted into law. He takes the view that this would have the effect of making the parents more anxious to become permanently identified with the country, and thereby helping in the work of Americanizing America.

The incorporation of cooperative associations in the District of Columbia, with the object of enabling the government employes to combat the high cost of living, is provided in a bill introduced in the Senate by Senator Arthur Capper, of Kansas. The associations are empowered to "carry on any lawful mechanical, manufacturing or trading business, as well as conduct any farming, horticultural, fishing or otherwise productive enterprise."

Regulation of prison labor is in effect in a bill introduced in the House by Representative John I. Nolan, of California, Republican, and chairman of the House Committee on Labor, who is also a labor man. Nolan would employ such labor for the production of supplies and authorize their purchase by the federal government. He would regulate the compensation and hours of such labor and fix its standards, and then prohibit the purchase of supplies manufactured by it under private contract. He would have the government equip the United States penitentiaries and the United States Army and disciplinary prisons and disciplinary barracks and the United States Naval prisons for the manufacture of supplies for the government. The bill provides that "the compensation to be paid for such supplies shall, so far as possible, be the prevailing price for like commodities in the vicinity of the institution furnishing them. Compensation and hours of labor for inmates of the institutions working upon such supplies shall be based upon the standard hours and wages prevailing in the vicinity in which the institution is located."
