Read

your instruction book
It says—

Old oil should be drained from the crankcase at regular intervals and replaced with fresh oil.

This statement is made because engine operation causes road dust, carbon, fine metal particles and other impurities to accumulate in the crankcase oil. The gritty oil circulates through the engine, impairing its performance, and ultimately leads to rapid depreciation and repairs.

These careful instructions from the manufacturer are often disregarded; cleaning the crankcase is a job generally disliked.

To meet this need Modern Crankcase Cleaning Service has been established by first-class garages and other dealers co-operating with the Standard Oil Company. These garages and dealers use Calol Flushing Oil—the scientific agent that cleans out old oil, dirt, grit and other impurities and does not impair the lubricating efficiency of fresh oil used. The cleaned crankcase is refilled with the proper grade of Zerolene.

Look for the garage or dealer displaying the sign shown below,—it means "Better operation and longer engine life."

to get in touch with Real Printing Service

SERVICE that is not based upon price alone, but upon the requirements and desires of each individual customer.

SERVICE that demands that each job be the best it is possible to give for the purpose it is supposed to serve.

SERVICE that is possible because it is backed up by a REAL printing plant—not a collection of worn-out, obsolete machinery and type—a plant completely equipped with modern machinery, each machine the best possible to procure for the work which it is intended to perform, and the latest faces of new type.

SERVICE at a price no greater than that of the ordinary brand of country printing. The price of G-T. printing is based upon the Franklin Printing Price List, the one-price-everything-marked-in-plain-figures idea applied to printing, and insures a square deal to the customer as well as the printer. It is used in over 10,000 printing plants all over the United States.
