Wanted—Position by man and wife on ranch. Address this office. If.

NOTICE OF ESTRAY. Notice is hereby given that we have taken up and are holding at Parkers Mill, one steer, marked with crop in left ear, and overbit and crop in right ear. Owner may have same by paying costs of advertising and feed bill. PYLE & GRIMES, Parkers Mill, Ore.

LOST—On the road between Ione and Heppner, Thursday, May 19, a pocket book containing, among other papers, a check for \$20, made by Mrs. Ethel Ashbaugh to M. L. Cantwell, and unendorsed, also gasoline coupon book. Finder please leave at Gazette-Times office. M. L. CANTWELL.

WANTED—Man with 8 or 10 horses and outfit to contract work of care of farm 17 miles south of Ione. Good buildings and deep well. CHAS. WAGNER, 48 1/2 Jefferson St., Portland, Ore.

LOST—Two head of horses, one bay 3-year-old mare, branded 8 on left shoulder, and one bay 2-year-old horse, branded cross on left shoulder. Notify H. C. Happold, Heppner, Oregon. 22.

Big 4th of July celebration at Parkers Mill.

FARM BUREAU NEWS (From the Morrow County Farm Bureau News.)

EASTERN ORE. AGENTS HAVE GOOD CONFERENCE

The County Agents of Eastern Oregon held their conference the first four days of the last week beginning with the feeding demonstrations and results of same at Union station, taking on the irrigation experimental farm at Hermiston, and winding up with the suggestion of them all, the Morrow experiment station under D. E. Stephens.

This annual conference is a get-together and exchange idea meeting of the agents who have been working in separate counties during the year. A number of new ideas are always found that are very profitable. One of the things in which Morrow county is considerably interested is sheep feeding. The farmers in Walla Walla county, Malheur and Lake counties, as well as Deschutes county have been making a very extensive experiment in feeding ensilage to sheep. This has been without exception uniformly successful.

Every sheepraiser in Eastern Oregon should know that the experience of these farmers and the results obtained at the stations justify the statement that the value of sunflower silage or corn silage, which is a little preferable to sunflower silage, is from one-half to two-thirds as much per ton as cured alfalfa hay. Not only is this true but sheep have done much better when given an ensilage ration.

Union and Walla Walla counties this year will fill more than a hundred silos with sunflowers. The Smythe Bros. Sheep company and their various organizations will build six silos to fill with sunflowers to feed sheep. Hampton and Gullford at Echo claim that sunflower silage is worth at least as much as two-thirds the value of cured alfalfa for lambing. Ed Neill, Echo, is also a strong booster for sunflower silage and will refill his silo. W. W. Howard, of Butter creek, will also build a silo to fill with sunflowers.

It is only fair to state that in the feeding of milk cows that there is not a uniform agreement as to the value of sunflower silage. The silage which has given the absolutely best results is barley and peas, second to this is barley and oats, third, corn; fourth, sunflowers. Deschutes dairymen are uniformly in favor of sunflower silage for dairy cattle while the dairymen in Wasco county are not so well pleased. Some of our dairymen who feed sunflower silage in Morrow county hesitate from the dairy standpoint, but all have agreed on the feeding of same to feed cattle and sheep.

With Morrow county being the second county in the state of Oregon in the number of sheep we are undoubtedly interested in a cheap way to carry the same through the winter.

New Weed Law

The problem of weed control is always a big factor in successful crop production and the new weed law is of particular interest to us because it sets forth the measures that may be taken in a legal way to bring about organized weed control. The new weed law authorizes the county court of each county to declare the county a weed control district. The old law authorizes the county court to take steps leading to the control of certain noxious weeds named in the law. The present law allows the court to determine what weeds shall be considered noxious in each county. This provision we consider important, as it is now possible to take control measures against any harmful weeds not listed as noxious heretofore. It is also at the discretion of the county court to determine whether a given weed, or plant shall be destroyed or merely prevented from seeding and spreading. For instance, it is not necessary to destroy all weeds as some of them are annuals and may be controlled if prevented from producing seed. Some weeds such as Canadian thistle and black grass are perennials and propagate by underground root stocks as well as by seed. When confined to very limited areas these weeds should be destroyed. When they are widely distributed over considerable area it is not practicable or advisable to attempt immediate destruction of the entire plant. They should, however, be cut to prevent any seed being produced in order that spreading may be checked.

If the county court of any county does not make a weed control district of the county or does not include in the district declared all the weeds that should be included as noxious the new law provides that the farm owners of any locality may petition for a special weed control district, naming the weeds to be declared in that district. If such a petition bears the names of at least twenty-five farm owners constituting a majority of the farm owners in the area affected, the county court shall declare a special weed control district as petitioned.

The county court may declare an entire county a weed control district but special weed control districts, affecting only a portion of a county, may be declared only at the request of a majority of the farm owners in the area concerned.

The above-mentioned provisions of the present weed law, make the problem of weed control a matter of public opinion as well as a duty of the county court. It should be made apparent to farm owners that the seriousness of the weed control situation justifies a much more active campaign than is being carried on. Whenever they are ready to organize for weed control, the law provides legal authority for organizing and carrying out the work. Farmers have the option of creating special weed control districts and may name the noxious weeds for their district. Furthermore, if the majority of the farmers within such a district become dissatisfied, they may by petition cause the district to be terminated for any or all weeds included in that district.

W. S. CARPENTER, Extension Specialist in Farm Crops.

Farmer's Drilling Wells

A. M. Edwards, an experienced well-driller from Washington has been drilling several wells in the Lexington district. He is an experienced well-driller and is having good success at last reports.

HOW TO DEVELOP STAY ON FARM MOVEMENT

How many people in Morrow county who read this little paper realize how fortunate they are in their choice of a home?

We hear on every hand, read in almost every farm paper, ways and means to keep our boys and girls on the farm. To many it has been a hopeless task, other partially succeed; that is the boys or girls stay at home but grudgingly, always complaining and therefore never making a success of the farm.

Now one wonders wherein Morrow county is to be congratulated. Put your wits at work and find the farm boys raised in Morrow county who go elsewhere to farm. Find the farm girls who rush to the cities to do office work and clerk in stores. Who are they? You will find them few and far between.

The boys may take a few months each year away at school until they are sufficiently educated to manage "dad's" farm, or one of their own. The girls may teach for awhile to buy the trousseau or help furnish the home when they go to help one of those selfsame boys to solve their farm problems.

We have no thankless job ahead of us. Morrow county solves her own problems when it comes to keeping the young people with us. Why we can scarcely get rid of the old ones, they want and come back to take possession; they sell and come back to buy. The transient laborer comes to our fields year after year. The "school-marm" from neighboring counties and states almost invariably drift back to the land of sage and sunshine. Our young people appreciate the freedom of their lives here. Their spirits, however meddlesome, are given full sway. No trammeling restraint is put on their wholesome enjoyment and it is always "Home Sweet Home."

We are beginning to educate our boys to the new farming. Giving them courses in tractor schools, a few months at O. A. C., a trip to the experiment stations, instructions and an insight into co-operative work. We should also have a school at which the boys could put the finishing touches to their vocabulary for use in handling mules. Taking it all in all they do not want to leave.

Who says there is not allotment. In the tang of sage on the air. Who says there is not enchantment. In the boundless vision rare. To those who gaze on our sunsets Stand rapt by the waving grain, Will never need ought to entice them To live in our land again. (Contributed)

Duroc Jerseys Popular

The Duroc Jersey breeders of the United States claim that 54 per cent of all hogs marketed in the United States are Duroc Jerseys. If this is true it is a remarkable showing and it cannot be doubted that the Duroc Jersey has improved as a hog very materially within the last ten years.

George Strohm at Hermiston has a fine bunch of hogs and has made quite a success raising the same. From 29 sows he has raised 221 pigs this year and they are all fine shams. Mr. Strohm has a good alfalfa ranch and spends a lot of money in the hog business. We believe that hogs will receive more attention in the future than in the past although how much remains to be proven.

After going over carefully the result of the experiment stations, the animal husbandry department has united in making the following recommendation regarding the raising of hogs in the state of Oregon. In their opinion in order to obtain the most profitable results from dairy farms, one-half of the calves should be vealed and one pig raised for each cow in milk. When one pig is stated that does not mean three pigs.

Prof. Potter believes that this may be taken as a general rule that the only people who may safely undertake the raising of hogs from a financial standpoint are those who can raise hogs in a way to utilize the waste product. In other words the business of raising hogs on expensive feed cannot at the present time be made successful.

He further considers it good business for men on irrigated land to raise pigs to be sold to grain men to run in the stubble. We think that this is good practice provided that you have a fair insight as to where you are going to sell your hogs.

Oregon Grain Growers Hold Election

The Oregon Grain Growers will hold their annual district election in the council room at Heppner on Wednesday, June 7th. At this time the delegates to the annual meeting will be elected; nominations will be considered for the choice of men for directors from Morrow county; the operation of the by-laws will be taken up and discussed; and other matters of policy for the organization will receive consideration, and the expression of the Morrow county farmers obtained on same. Every farmer should attend this meeting.

How to Cultivate and Relation of Date of Plowing to Value of Summer-Fallow Cultivation

Plowed April 1, no cultivation.....26.5 medium cultivation.....27.4 good cultivation.....31.9 May 1, no cultivation.....29.5 medium cultivation.....26.3 good cultivation.....27.3 June 1, no cultivation.....22.6 medium cultivation.....22.4 good cultivation.....22.6 This is from an average of eight years and shows that if you are going to get any results from summer-fallow cultivation that you must plow early. In other words April first cultivation has given an increased yield of 5 1-2 bushels per acre while June first plowing with good cultivation has given absolutely no increased yield per acre. Harrowing wheat shows a consistent loss of two bushels per acre for an eight year average and is a note worthy to add that in only one year in which there has been any increase from harrowing fall wheat in the spring.

How We Build The Structure of Good Paint

WE make good paints like this—to save you money; and we've put 72 years' experience into them.

We use pure PIONEER WHITE LEAD, pure linseed oil, zinc and color in scientifically exact proportions.

The lead base is made so fine that it will pass through a silk screen with 40,000 meshes to the square inch. That means covering capacity and ease of spread.

A special device super-purifies the lead, making it "Whiter" so Fuller paints are exceptionally clear-toned. All ingredients are thoroughly mixed in specially designed machines, so the paint is always uniform and smooth.

The result on the house is a beautiful, elastic, tough, protective coating that stays, if properly

applied, five or more years, keeping the wood like new.

Some people figure paint economy as "cost per gallon." That is wrong. For "cheap" paint doesn't cover so much surface—you buy more gallons. "Cheap" paint is harder to spread and you have more labor cost. So the "cheap" paint on the house costs just as much as the best of paint. Don't allow surfaces to rot—it costs less to paint them.

"Cheap" paint on the average starts cracking in twelve months, while the best paint stays intact from five to ten times longer, if properly applied. Figure the cost per year of service and decide which paint you want to use.

We spend more to make paints for your economy. Be sure you get them when you paint.

Free Advice on Painting

ASK our agent for our free advice. He will show you a color card which shows 12 shades of your desirable paint.

We have a Fuller Specification Department which will tell you all about the most desirable color schemes, color harmony and those other details you want to know.

Take advantage of Fuller House Paints. Take steps to paint now. Don't let weather depreciate your investment.

W. P. FULLER & CO. Dept. 10, San Francisco Pioneer Manufacturer of Paints, Varnishes, Enamels, Stains, and PIONEER WHITE LEAD for 72 Years Established 1849.

Lower Farm Implement Prices THE BREAK HAS COME. FOR some time prices paid for your farm products have been low. It is but natural for you to want lower prices on the farm implements used in producing your crops. Announcement is made by the Oliver Chilled Plow Works of a general price reduction in their lines that brings prices to the basis of 1918. They are first to make this reduction and are taking the loss that the move brings—for there has been little reduction in labor or material—as their contribution in hastening a return to normal conditions. This is your opportunity to secure new, up-to-date Oliver quality implements that will help you produce a full crop, and get them at a price in line with the reduced prices on your farm products. Peoples Hardware Co.
