HEALTH HABITS. State Board of Health. When children are young, they are taught how to walk, how to dress themselves, how to eat and to perform all the many activities which life and civilization demand of us. The various actions which they learn become habits and are performed without putting any special thought on them. It is only the child who has never learned how to use a fork who is self-conscious and embarrassed when the need to eat in company arises. It is just the same with health habits. We don't want to be thinking continually about our health and the various dangers that surround it. If we did, the worry would be worse than the chance of disease. However, we do not want to teach our children correct habits of health so that they become just as automatic and matter-of-fact as any other daily performance. Instead of amusing ourselves by teaching children to be afraid of bugs, policemen, doctors and so forth, why not instill a little reasonable fear of playing with children who have contagious diseases? We already teach our youngsters to wash themselves; let's go a little further and teach them to do it before every meal. Or even further, and give them the habit of never putting their hands or anything else into their mouths unless they (the hands, and for that matter, the mouth) are clean. Many, if not most, of the catching diseases get in thru the mouth; children cannot possible keep their hands clean all the time; therefore they must be made clean before meal times. Children are taught to eat three regular meals a day. At the same time, they can be accustomed to making those meals of good, healthy food. A person who has formed the habit of eating wholesome food in childhood will find it a hard habit to break. The same applies to sleep.
