sold at the price fixed. The country vas so organized in every district the there could be immediately reporte to Washington the name of any shop retailer who did not carry out the regulations of the War Industries Board as to price and quality. Through restrictions on his labor, money, raw materials and transportation no man-ufacturer would have been permitted to sell to any dealer violating the regulations. The Armistice stopped the execution of this plan.

Another plan of this nature: The manufacturers of men's and women's wearing apparel had in 1918 been called to Washington, together with the retailers of various coods, and notified that regulations would have to be made in regard to retail prices and etandardization of clothing.

The rulings by the board were made known through the issuance of official bulletins at irregular intervals and were widely distributed by the press, which co-operated in this most neces-sary work with a whole-hearted purpose that gave to the orders of the War Industries Board the instant and broad circulation they required

Mr. Hoover already was doing much to perfect his control of food products and prices. There was also talk of fixing rents, and in some cities this

If we were to start, in the event of enother war, at the place where we were industrially when the World War ended, the President, acting through an agency similar to the War Indus-tries Board, would have the right to fix prices of all things as of a date previous to the declaration of war when there was a fair peace time relationship among the various activities of the nation. It would be illegal to buy, sell, serve or rent at any other than these prices. Brakes would be applied to every agency of inflation efore the hurtful process started. An intelligent control of the flow of men. money and materials would be imic heretofore ensuing on the first appearance of the frantic demands of war. The Draft Board would have before it the rulings of the priority com mittee, together with the estimated needs of every business and profession in its relationship to the conduct of the war, and men would be selected accordingly. The Draft Board more intelligently decide, with the advice of the priority committee many of the problems with which it would be faced. There would be no sending of men to the trenches who were needed for expert industrial war work and then bringing them back again. Businesses not necessary to the winning of the war would be cur-tailed. The Draft Board would have that information before it.

The prices of all things being fixed. the price fixing committee would make any necessary adjustments, as was done during the war. Under the sys-tem used in 1918 these prices were made public and adjusted every three months, so that any consumer or pro-ducer had his day in court when he considered prices unfair. Those who complained that during the war prices were too high had this ready recourse

the country would have been mobilized by the formation of committees representative of each industry as was done in the World War. Over them would be placed a government direc-ter or commodity chief. The various government departments would appoint committees representing their requirements, so that on one committee the resources of the nation would be represented and on the other the demands of the government. The government director would stand between to decide, in conjunction with the priority committee, to what department supplies should go.

cted like any other resource. ing the profit out of war" is not synonymous with "conscription of wealth," as it is sometimes regarded. The latter is a theoretical project, pro-hibited by our Constitution, contrary to the spirit of our social and political institutions, and impossible in practice. Taking the profit out of war is an orderly and scientific development of the economics and conduct of modern war, necessary to the effective mobilisation of national resources and indispensable to equalizing the burdens of war among the armed and civilian population. Born of expe-Born of experience and proved by practice, it removes some of the most destructive concemitants of modern war—the confusion and waste incident to war time

This term "conscription of wealth." need by so many, has created a hone among those of socialistic tendencies and a fear among those who, like me believe in our system based upon per sonal initiative and reward, of a tak ing of money, without payment, for the use of State. Neither the hope nor the fear is justified by the recommendation herein contained or by our experience in the war. The use of money should be controlled and directed in a national emergency. A use his money as he wishes than he should be permitted to use the pro-duction of his mine, mill or factory except through the general supervis-ing agency. This was being done to ward the end of the war.

Individuality in Houses

Many feel that duplication of bouse designs in a row is conducive of economy. Perhaps it is, so far as first cost is concerned. But is it economy when it is considered that higher prices could be asked for houses whose exteriors were all different designs. with an attempt made to create an architectural composition out of an entire row of such house units? Correct planting of trees and shrubbery would add immeasurably to the value of building operations, and lend to them that feeling of restfulness so generally lacking.

Taking the Profit Out of War

By BERNARD M. BARUCH

Reprinted from The Atlantic Monthly.

[The February issue of the Atlantic for 1925 carried a paper by Mr. Sisley. Huddleston dealing with the general subject of "taking the graft aut of war," which Mr. Huddleston called "An American Plan for Peace." The threquoted phrase was put into the language by the War Industries Board toward the close of the World War through its efforts to eliminate all war profits. Mr. Huddleston's article came to the attention of Mr. Bernard M. Barwch, choirman of the War Industries Board and administrator of the non-profit plan wid fas he writes us), since it seemed to indicate a growing interest in the cidea, induced him to invoke practical means to bring about a full comprehension of taking the profit out of war in the various great countries of the world. To this end he responded to a suggestion of Mr. Owen D. Yanng, of the Page School of International Relations at Johns Hopkins University, that he establish a course of lectures there to expound the War Industries Board plan in detail. Later he will proceed to make similar arrangements at leading plan in detail. Later he will proceed to make similar arrangements at leading universities in Great Britain, France, Germany, Italy, and Japan. Agreeing with Mr. Baruch that the subject calls for public knowledge and discussion, it was natural for the Atlantic to turn to him for the following paper.—The Editors of The Atlantic Monthly.]

win the war. Further, there was the Railroad Administration with its need for material and labor, and finally there was the feverish quest for labor and supplies on the part of the munition makers-all competing for labor. money, materials, transportation, fuel, power, and each insisting on the greater importance of its activity. All this while the labor supply was being lessened by the flow of men into the

While an endeavor was being made to bring order out of chaos, the great undertaking had to go on. Men, ships, munitions, food, material, had to be provided. Old organizations, bureaus and traditions had to be met and changed, but not destroyed until the new was set up. The wonder of it all is, not that there were so many mistakes, but that so much was accom-

At the time we entered the war prices were at their peak, and tending higher because of the war's insatiable demands. The problem was not alone to secure the materials and labor and to stop the confusion, but to do it in such a way that the morale of the people would be maintained. The prices of some things, like steel and copper, were fixed far below prevailing rates, and the wages of labor in those industries were standardized. The more highly organized an industry, the easier it was to arrange. Order did not commence to appear until the Army funneled its needs through one man sitting with a section of the War industries Board and until the Navy, Shipping Board, Allies and Railroad Administration did likewise. Each department satisfied its requirements through a central authoritative body. This was called the War Industries Board, controlling and directing all materials and co-ordinating through its chairman the whole system of goverumental and civilian supply and demand. It was created by executive

order in March of the year 1918. Briefly, this board endeavored to mobilize the industries of America so that the fighting forces of the Allied and associated nations could draw from the United States-the last reservoir of men, materials and moneythe things needed for the winning of the war at the time the things were needed and with the least dislocation of industry and the least disturbance of the civilian population.

The War Industries Board was organized like any other supervisory committee, with a chairman, vice chairman, members in charge of various activities, bureau chiefs and subsought to arrange the whole industrial war field under the plenary powers conferred by the President and the Congress. How well it did this is a story for others to tell. What it did is the basis of the plan I am here drawing.

It was comparatively easy to fix prices and to distribute materials, and indeed to stabilize the wages of labor in those industries in which prices wers fixed. The labor situation, howbecame increasingly difficult, particularly when General Crowder found it necessary to withdraw men for the proposed campaign of 1919 after 4.000,000 soldiers had already been taken.

Much has been said about the profiteering of labor. It is an unjust accuention. It is only fair to any that this odition was primarily brought about brough the inexperience of the organ ration within our own governmental icpartments and by the furious bidting of munitions makers and ship builders for services. That situation, regather with the increased prices of he things that labor had to buy with he results of its work, made it inevithat labor must get higher

So It became evident that the price ixing program had to go even furher, and the War Industries Board, when the Armistice came, was proeeding with a campaign to fix the orless of all the basic things that in-sor had to buy. Some had previously sees fixed. I speak of labor in a much pronder sense than manual labor, for the unorganized so-called "white colpart of our community-clerks, teachers, government employees, protessional men-were less able to meet the situation than labor in the narrower sense. For the protection and zourd in his window could sell snoes, and only the standardized shoes could be sold. No jobber or manufacturer would sell shoes to anybody whe did not have this card. The shoes were

to be stamped Class A. B or C and had One of them provided that manufacturers, jobbers and retailers of shoos could make and sell shows only of a specified quality at a fixed price, effective July, 1919. No one who did not have a card of the War Industries

War was once described as frus

gia's most profitable industry. It needs only a scant examination of history to learn that other countries were open to the same indictment. The methods of the Robber Barons did not pass with the end of feudalism. Annexation by conquest did not But when America entered the World War President Wilson fathered a dectrine that shall always govern us-that never a foot of territory ould be added to our boundaries by

So, as America has taken the lend toward making impossible national profit through war, it too may be America's privilege to point the way toward making impossible individual profit through war. To take the profit out of war is to take a long step toward creating an economic detests tion of war. The experience of the United States in the World War af-fords a basis for the belief that the plan herein discussed is practical. In fact, it is more than a belief-it is a certainty, although not widely known

The world is such a busy place, and the radius of human activity has been so greatly enlarged because of modern inventions, that it is not strange that there are but few people who are coneffectively taking place in this country in the mobilization and use of its material resources in the World War a process that would have eventual-

oliminated all improper profits. Strength is given to the public ad-ecacy of industrial mobilization made by both President Harding and President Coolidge-Mr. Coolidge as recently as last October in his Omaha the fact that the plan they advocated Es a part of the regular national war arencies had once been set up and successfully operated under the War dustries Board.

Preceding the President's recent clear expasition of this subject, some degree of public interest had been engendered by an exchange of letters be-tween Owen D. Young (of Dawes plan fame), in behalf of the Walter Hines me School of International Relaondence resulted in the establishment of lectures at the Page School (of Johns Hopkins University) on this me. Previously the Atlantic Monthby printed an article by Staley Huddlen, who pointed out that Europe saw great strides toward peace in the American idea of "taking the profit out of war" in a systematic way. His boole reference was to the plan of the War Industries Board

The resources of a country might referred to as the nve M's: an power; (2) money; (3) mainmaterial recourses (including TAW annfacturing facilities, trunsportaon, (nel and power); and (5) morale, The intelligence with which the first ar are directed and co-ordinated as a whole will determine the fifth, the morale of the community.

In the war emergency it early become evident to those who were charged with the responsibility mobilizing the resources that there us a just sentiment among the people against profiteering. Profiteering might be willful and profit making might be involuntary; but, whatever its form, there was a just determination it should cease. So it became necessary to fix prices where the supply was limited.

Wherever the government created a chartage by its demands, prices were not only for the Army, Navy and the Allies, but for the civilian populaties as well. And in addition to price fixing on war essentials (such as stee). wool, copper, and so forth), the balance, after the war program had been filled, was rationed or distributed according to the priority needs of the various civillan demands. In other words, where the price of the product of an industry was fixed that industry had to deliver the part which the government did not need to the civilian population, not in the way the industry chose, but as the government di

It must be remembered that when the war came there was no adequate preparation, indeed, it is doubted by the best authorities whether any effective form of preparation then known would have been of much avail in view of the widespread and engulf-ing results of the war and the lack of knowledge of the various instruments of destruction which were being devixed and which it became necessary

Our own Army had several divisions competing one with another for materinis, transportation, housing, and so forth. On top of that there prevailed the demands of the Shipping Board, with the slogan that ships would win the war, and of the Food Administra-
