"Talk Is Cheap!"

"TALK is cheap—but it takes money to buy a farm!" Many a schoolyard argument of boyhood days has been ended with this homely bit of philosophy.

For the American telephone user, talk is truly cheap—cheaper than anywhere else in the world. But it takes money to keep his telephone service cheap and to make it ever and ever cheaper. The Bell System is devoting millions of dollars to research in order to discover economies that will partially offset the rising costs of labor and materials. It is spending nearly three-quarters of a million dollars a day for new plant, every dollar of which extends the scope of every telephone and makes every subscriber's service more valuable.

The savings of telephone users, invested in telephone securities, have helped to make the Bell System's nation-wide service the most economical, as well as the most efficient and most extensive, telephone service in the world.
