

New Legislature Is Strongly Republican

The election on November 2 came very nearly being unanimously Republican so far as the state of Oregon is concerned. The roster of the Thirty-fourth Legislative Assembly will contain the names of but three Democratic senators and four representatives, according to the official list given out by Secretary of State Kozser this week. The personnel of the next session which opens January 10, 1927, will be as follows:

- Senators.**
- Dist. No. Name
3. Edward F. Bailey, Democratic.
 13. W. W. Banks, Republican.
 24. A. G. Beals, Republican.
 4. John E. Bell, Republican.

1. F. W. Settlemier, Republican.
16. Charles T. Sievers, Republican.
28. E. W. Snell, Republican.
11. S. L. Stewart, Republican.
2. L. L. Swan, Republican.
28. C. A. Tom, Republican.
28. H. H. Weatherspoon, Rep.
29. George P. Winslow, Rep.

Grazing Periods and Forage Production

Ways in which the productivity of cattle and sheep ranges may be kept up or bettered are described by grazing experts of the Forest Service in a bulletin just received by the District Forester's office at Portland.

The time when stock are allowed on a particular range has a vital influence on the amount of forage produced each season, and consequently on the number of stock that the range can continue to carry. "Early yield of forage," states the bulletin, "is comparatively small if the herbage is cropped when its average height is four inches or less. Grazing when the plants are at this stage stunts the vegetation, and does not satisfy the needs of the animals because of the low food value of the short succulent forage. The high succulence and comparative low nutritive value of young herbage also sometimes causes serious livestock losses early in the spring." As a general rule grasses should be about six inches in height before grazing begins, and the earlier-maturing plants should have flower stalks showing.

"The bulletin goes on to say that 'Grazing closely twice or even three times in a season, provided the first grazing is late enough and the intervals are sufficient for the vegetation quite to recover from each cropping, ordinarily does not seriously affect the yield and vigor of the plant cover. 'Cropping a pasture each year to the maximum of forage production,' according to the bulletin, 'is sure sooner or later to cause a sharp decline in its grazing capacity. To insure good production of the more palatable forage plants requires prevention of too early grazing, avoidance of overgrazing, and effective control and distribution of stock.'

The recommendations made in the bulletin are based on studies made at the Great Basin Experiment Station and in other parts of the Wasatch Mountains in Utah. The bulletin includes practical suggestions for the management of stock on the range, the relation of climate to grazing seasons and the experimental foundation on which the recommendations regarding grazing seasons are based.

Copies of the bulletin, "Grazing Periods and Forage Production on the National Forests," Bulletin No. 1405-D, may be obtained, as long as the supply lasts, from the Department of Agriculture, Washington, D. C.

WANTED, A LOCATION

From State Board of Health.

Suppose a large industrial plant desires to move to Oregon, and invites applications from all municipalities, what inducements could your town offer? Let us assume that your town has good transportation facilities, a cheap and plentiful power supply, and an adequate labor market. What does it have to offer in health protection, in recreation facilities, and in other things which make for the comfort and well-being of mankind?

The average individual in the United States loses about seven days each year from sickness involving inability to work. Can your town reduce the loss in wages and the decrease in production resulting from this sickness, a loss which reaches the tremendous amount of one and one quarter billion

dollars per year for the United States?

An adequate and pure water supply must be one of your inducements. Such a supply will insure against the ravages of typhoid fever and other intestinal disorders. Your town must have proper sewage disposal; it must provide a sewage system large enough not only for its immediate needs but also large enough to take care of the increase in domestic and industrial wastes which the location of the industrial plant will occasion. Your town should provide proper garbage collection and disposal.

The food supply should be rigidly inspected. The milk and other dairy products should come from tuberculin-tested cows, and should be fresh and clean. Your town should have a health department to supervise the sanitary production of foods, as well as other health activities. There should be sanitary ordinances which, when properly enforced, will give protection to the health and comfort of the community.

The children must be given protection against the contagious diseases. The town should have available the

services of a trained school nurse and of a school physician. The school buildings should be modern in design and construction. There should be playgrounds for the adult as well as for the child.

The town should offer proper and adequate hospital facilities. It should deal harshly with the quack and the health exploiter. It should offer resources for recreation, both mental and physical, and should have these resources under intelligent supervision.

What town in Oregon can offer all these inducements?

RHEA CREEK GRANGE.

The regular meetings of the Rhea Creek Grange will be on the first Sunday and third Saturday of each month during the summer. The Friday meetings as held heretofore are now changed to Saturday.

For real comfort buy an Allen's Parlor furnace. The best of all for economy and comfort. Sold by Case rot pack exclusively with winter rain.

presents a tidy appearance and is in excellent condition for the next season's use.

A big special on linoleums, conglomerates and Certainteed floor coverings beginning Saturday, Dec. 4, both yard goods and rugs. Buy Xmas gifts that have the extra merit of service. Case Furniture Company.
