FARM MARKET TREND

Corvallis, Oregon, August 15.—GRAIN—Light frost in Canada and reports of further rust damage on both sides of the boundary caused sharp advances in the wheat market last week. Official estimates as of August 1 indicate less winter wheat but more spring wheat in the United States and more spring wheat in Canada than estimated a month earlier. The Canadian crop is late, however, and there is still danger of damage from frost as well as from rust. Strong premiums for protein continue to be paid. Export demand on the Pacific Coast improved. There were no important changes in the European wheat situation. A smaller crop of barley than last year is expected in Europe and Japan and the California crop is short, but for the United States the production of barley this year is estimated to exceed 1926 by 1,200,000 tons. Markets held steady last week with prices materially above a year ago which reflects high prices for corn.

FEED—More firmness has been noted in feed markets owing to the firm prices for grains.

LIVESTOCK—Firm prices for well finished cattle and improved demand for good feeders but some weakness in poorly finished killers marked the cattle markets last week. Good fat lambs and choice feeders were steady generally and up a little at some eastern points, but in-between kinds were scarcely steady with receipts increasing. Hogs were up at San Francisco but steady to lower at other points with receipts nominal.

WOOL—Some slackening in demand was noted at Boston, but on the whole the situation continued firm last week. Mills are being advised to buy for needs during the next few months at present prices. Advisors point to a firm foreign market coupled with small stocks of imported wool in this country and an improved demand for goods.

CLOVER SEED—White clover seed production is expected to be slightly larger this year but carryover smaller than last year. Prices have not been established. Crimson clover seed is moving quickly at prices to growers about \$1.50 more than a month ago and \$5.25 more than a year ago. Wholesale prices show a greater increase as compared to last year ranging from \$17.50 to \$18.50 per hundred pounds.

VEGETABLES—A record breaking crop of onions is forecasted. Fifteen northern and western states are expected to produce 18,313,000 bushels. This would be 2,600,000 bushels more than last year and 5,000,000 more than the five-year average. Supplies of late shipping cabbage are expected to be large owing to high yields in prospect in late states except Oregon, Colorado and Indiana.

PRUNES—The latest official estimate indicates that California will produce 408,000,000 pounds of dried prunes this year or 108,000,000 pounds more than a year ago.

Also one sorrel mare, weighing 1100 or 1150; unbranded, roach mane and has bad wire scar on one front foot. Both are broken, and shod all round when lost.
