

New Features of the 1929 Case Combine

Because Owners Praise Them

All main bearings are ball bearings in dust-proof cases running in oil. The cylinder, beaters, fans, draper, header drive shafts and other important bearings are of this type. Require oiling not oftener than ONCE A WEEK.

The rear shoe sieve is self leveling, automatically adjusting itself, assuring you of uniform separation.

The header gears are steel cut, enclosed in a dust-proof case, and running in oil.

The Hillside Combine will level on steeper grades than ever before.

The CASE COMBINES have many other improvements to offer the user and never before have combines as efficient, economical and easy to operate been offered the grain grower as the 1929 models of Case Combines.

The Peoples Hardware Company keep a FULL LINE OF REPAIRS for these machines, and the Case Combine user is guaranteed that his harvesting will proceed through the season without costly, tedious delays.

BECAUSE hundreds of owners constantly speak in highest praise of their excellent work and sturdy qualities, the use of Case Hillside Combines is growing rapidly. Extremely strong construction assures long, dependable operation and low upkeep cost.

The flexible header follows the contour of the ground. The platform tilts at the correct angle for cutting grain anywhere between 4" and 36" from the ground. All adjustments are quickly and easily made. With this construction, tall or lodged grain can be harvested without waste on any hill where grain growing is practical.

The Case Combine levels toward the hill on the header side, making the machine safe on the steepest hillsides. Ample platforms allow the operator to inspect the operation of every part of the machine without stopping.

Case Hillside Combines save time, labor and grain. They increase the profit of grain growing. Mail the coupon for complete information.
