**The New BUICK**

If you were to lift the body from the chassis of any one of a hundred cars—and compare the vitally important details of chassis design and construction—you would find Buick so outstandingly superior in all phases of fine car engineering that you would almost inevitably make Buick your choice. Here is what you would see in this famous chassis:  
**Lovejoy Duodramatic Shock Absorbers**—front and rear. Combining to check both bound and rebound, and providing a degree of riding ease without parallel anywhere.  
**And, finally, such established Buick superiorities as the famous double-drop frame of toughest steel . . . the massive side and cross members reinforced at points of stress to insure greatest long life . . . the celebrated torque tube drive, Buick multiple-disc clutch, self-lubricating differential, and numerous other features.**  
When the list of Buick's chassis features—entirely aside from the irresistible appeal of Buick's new Fisher Bodies—reads like a roll-call of all that is soundest and best in fine car engineering . . . and when, in addition, you can buy a Buick for as little as \$1225, f. o. b. factory . . . what wonder that all comparisons lead to Buick! What wonder that more than 2,000,000 people have invested their money in Buicks—and that from two to five times as many are purchasing this new Buick as any other automobile priced above \$1200!
