Farm Pointers

Every pile of leaves burned is just that much valuable plant food lost to the soil. Surveys made of Oregon soils by the experiment station show also that the additional humus supplied by leaves and other plant wastes is needed in the majority of soils of the state.

The average fowl in the country today lays only about 60 eggs a year, says the Oregon Experiment station. Good feed and management would raise this figure with some hens, but others simply lack the machinery for more eggs, hence improvement is a matter of breeding.

The earlier the better grade will probably be obtained. Most growers also find that it is more satisfactory to deal with a reputable seed house than to depend on supplies from the corner grocery, says the experiment station.

Farmers of one county in Oregon have ordered 10 carloads of ground limestone from the state plant this fall after making limited tests last year which proved successful. The orders, assembled by the county agent, totaled 352 tons for 82 farm-

ers. One man ordered 50 tons for himself after getting big crop returns from the use of 15 tons.
