THE CONVALESCENT HOME.

I have called it the Convalescent Home because there is something sort of cheery about convalescents, getting well. We have tried to eliminate all hospital regulations and intend to make it a home where the inmates can be cared for by experienced trained nurses without the restraints and regulations necessary in regular hospital life. We have secured a large, well heated house, with plenty of shade and grounds, far enough away from city life to insure quiet, yet near enough to be in touch with the physicians at all times. Located on Water street, just east of the laundry.
Mrs. L. G. Herren, G. N., Supt.

SOME LUCKY DOG

One of our town's late bridegrooms dropped in on us the other day and remarked that his honeymoon was over; we ventured that his whole married life should be one continuous honeymoon, to which he replied: "The honeymoon is over when friend wife gives you pork and beans for dinner, and gives the pork chops to the dog."

Light Said Imperative in the Care of Measles

(State Board of Health.)
One of the earliest signs of an oncoming attack of measles is the reddened condition of the eyes. Tears may be noticed as excessive and almost ready to overflow the lashes during the stage of sneezing and coughing that precedes the skin eruption. These early inflammatory warnings in the eyes require no treatment. They are usually accompanied by some fear of light, and this fear of light has prompted the vicious care that is responsible not only for loss of eyesight but also for the loss of life of many children.
Probably more harm has been done by the old-fashioned notion

that the child with measles must be kept in a dark room than by any other nursing fault. The fact that the tears are flowing and the eyes are a little congested is not sufficient reason for putting the child in a dark room. In no other disease of childhood are fresh air and good light so imperative in treatment. Fresh air is necessary to avert and counteract lung infection, the thing that kills these babies and children later from pneumonia; and good light, to help kill the germs of pneumonia and other germs often responsible for the serious eye conditions developing in later complications in measles.
Too early use of the eyes at close range and for too long a period of time after any illness when the eye muscles are relatively weak and flabby, has been responsible for muscle faults. This fact becomes noticeable during convalescence.
