WATERED CLOVER RETURNS PROFITS

Experiments With Ladino Variety Show Big Dairy Possibilities, Say O. S. C. Specialists.

If a dairyman could get green pasture for his cows at 5c a day per head and then get 12c worth of feed per head from it, he would consider it a highly profitable transaction.

That is exactly what has been done, however, with irrigated Ladino clover pasture on the Oregon Experiment station farm at Corvallis where 1 1/2 acres of practically waste land have been converted into summer pasture returning 30 per cent on a \$150 investment per acre.

The results of the experiments have just been published in an illustrated bulletin, "Irrigated Pastures for Dairy Cattle," by I. R. Jones and P. M. Brandt of the dairy department. The bulletin is available for free distribution.

Last season the pasture was divided into three plots and pastured continuously from May 9 to October 17 excepting 16 days in mid-season when the cows were put on some clover and oats pasture. During this period an average of 42.1 cows per day or 374 per acre.

Careful records of costs throughout the experiment were kept, including detailed costs of the land, the irrigation system, labor and interest charges on the investment thereafter.

With alfalfa hay valued at \$10 a ton and corn silage at \$7, the pasture returned in equivalent feed at the rate of 11.7c per cow per day at a cost of but 4.3c, or giving a net return in feed value of 7.38c a day per cow. This is equivalent to a return of about \$46 per acre for the pasture season.

Experience with this pasture as well as by farmers over the state who are using Ladino clover shows that the value is even greater than the figures indicate since this clover appears to be highly superior as a dairy feed, stimulating high milk production while maintaining body weight and general physical well being of the herd.

HARVESTING MACHINERY

Should be selected with care and judgment, for in making selection of equipment that is to have the important work of preparing the crop for market or use, only the most efficient and dependable machines will return the greatest benefit for the large outlay of labor and expense already incurred in bringing the crop to maturity. Not only should one consider the way the machine will perform this year, but how it will stand up and give efficient service over a period of years. Known throughout the agricultural world as the finest in farm machinery are the products of

McCormick-Deering

Look to your needs now, and order that needed mower, binder or combine. To insure a good crop next year, the summer fallow must be kept free of weeds in order to conserve moisture. This can be well done with either a McCormick-Deering or a Cheney Weeder. Let us demonstrate to you the advantages of our line.

Don't Ask It

Why does the Banker object so seriously to carrying Overdrafts? The answer is easy. An Overdraft is merely an unsecured Loan.

The Banker has a responsibility to his depositors. He cannot permit their money to be risked that way. Do not ask this Bank to honor your checks if you haven't sufficient funds. You are simply asking us to let you have some of our depositors' money without security. We can't do that, for it is not in line with our sound business policy.
