Take 'Em Young—Raise 'Em Right Is Slogan of Home Ec Girls; Youngsters Thriving.

They start 'em young in college these days! At least one might believe so on hearing the youngest co-eds at Oregon State college this year are two lassies of just one month and three months old respectively!

They have gone to college, all right, but it so happens that they are the two newest home management house babies who will spend the year in charge of successive groups of senior girls in home economics. Every girl who is graduated in "home ec" must now spend six weeks in one of those "practice" houses where she does everything from cooking to caring for the baby. Of course there is one person who serves as overseer at each house.

Hard on the youngsters? Apparently not, for these two are the seventeenth and eighteenth since the plan was started and all 16 of the others thrived and grew healthy on their co-ed care.

CARE GIVEN BULBS SHOWN IN RESULTS

Season Is at Hand for Planting Tulips, Narcissus, Lilacs; Helpful Hints Given.

Those gorgeous tulips and beautiful narcissus that will herald the coming of another Oregon spring are dependent on proper care and planting this fall, reminds F. P. McWhorter, associate plant pathologist at the experiment station in charge of bulb investigations at Oregon State college. Bulbs left in the ground will need little attention, but a few precautions for those just being planted will insure better blooms.

For home preparation it is better to underfertilize than to use too much, he says. Bone meal is safer to use than animal manure and is very satisfactory if followed by a top dressing of commercial fertilizer. Unrotted manure is dangerous to bulbs.

The old rule of planting bulbs three times as deep as the bulb width is too shallow, according to experience of commercial growers. They advise putting well formed tulips and narcissus in so that the top of the bulb is six inches below the surface. Slabs, chips, and bulblets are planted more shallow. Hyacinths do well five inches deep and crocuses three.

Mulching is not necessary in western Oregon and in any case is best left off till after the first freeze. Lilacs are the best bulbs for planting in acid soil or in deep shade, while most bulbs prefer the sun.

You've Heard the Story Of the fellow who thought that if he made a better mouse trap than anyone else, the world would make a beaten path to his door. He went broke because the world forgot where his factory was and forgot how good his mouse trap was. In these modern times with the changed methods of merchandising, advertising has become the necessary part of every commercial success. It is not even possible nowadays to sell mouse traps or breakfast foods or ladies' coats without advertising. From the simplest purchase of a package of gum to the luxurious automobile, good will has been built up by advertising. The American buying public has come to look to the advertisements and to depend on them for its information and enlightenment.—Kelliher, Minn., "Forum." Read the Advertisements
