Science Provides Methods To Save Children's Lives

THE VICIOUS CIRCLE. A graphic representation of how tubercle bacilli, the sole cause of tuberculosis, are spread broadcast by a person with the active disease, infecting another member of the family, who in turn grows up and infects others, thus completing the circle.

In the effort to discover the earliest manifestations of tuberculosis in school children, several communities have set out to examine every school child for the indications which are revealed by the tuberculin test and the X-ray in advance of outward symptoms. The tuberculin test, a harmless procedure, selects those who are infected and should be examined with the X-ray. In turn, the latter indicates whether there is danger from disease or not.

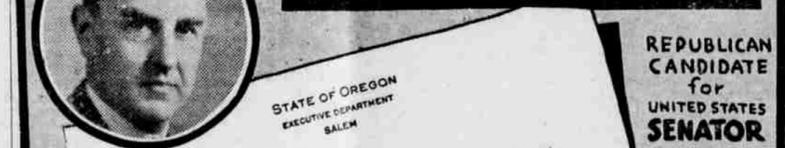

The Massachusetts Department of Public Health was one of the first to begin such a campaign. Not only did this search disclose children in danger, but in many instances it led directly to the discovery of an active case in adult members of the same family, from whom the children had been getting the infection that was preparing them for a similar destiny.

One such example was recently described by Dr. Henry D. Chadwick, an outstanding authority on tuberculosis, who had charge of this work in Massachusetts and now is developing a similar project in the schools of Detroit, Michigan. A ten-year-old girl was discovered with the childhood type of tuberculosis in a marked degree.

"The obvious thing to do," said Dr. Chadwick in reciting this instance, "was to find the source of the disease and protect her from further infection. No treatment would avail if she continued to receive further doses of tubercle bacilli. It was doubtful if she could withstand the amount that was already producing disease."

"The field nurse in the district in which the child lived investigated the conditions at home and was successful in getting the parents and the two sisters to come to the clinic for an examination. One showed the childhood type of tuberculosis, the other had the adult type, involving the upper third of the right lung. In the latter case there were also indications showing that the childhood type had preceded the adult type for at least a year."

REPUBLICAN CANDIDATE for UNITED STATES SENATOR. STATE OF OREGON EXECUTIVE DEPARTMENT SALEM. May 9th, 1932. Hon. William G. Hare, Hillsboro, Oregon. My dear Mr. Hare: I have your letter of May 9th. In reply permit me to state that originally it was not my intention to participate in any way in the present senatorial campaign. However, in view of the fact that you state in your letter that the voters are being deceived and misled by published statements that the water power legislation prepared by Colonel A. E. Clark at my request for the last legislature was not in harmony with the platform on which the late George W. Joseph was nominated for governor and on which I was afterward elected to the governorship, I feel that I can no longer remain silent. These representations, of course, are utterly false. Without compensation and at his own expense Colonel Clark, at my request, accompanied me to Washington, D.
