Prepare summer meals in cool comfort!

An electric range sends its heat into your food ... does not make your kitchen a "bake oven"!

- The oven of an electric range even when used for several hours raises your kitchen temperature only about 1°. This is because rock wool insulation keeps the heat inside the oven where it belongs. The surface units direct their heat into utensils, too.
- Because the temperature control does your oven watching, you don't have to flood your kitchen with heat every few minutes pecking and turning your food. You just open the oven door once when the clock says your food has been in the correct length of time and remove your dinner.
- Thus when you have an electric range, your kitchen stays comfortable. Why continue to sweat in the heat of some old-fashioned cooking method? Electric ranges are priced so that you can afford them. You'll find the terms convenient. Start enjoying real cooking comfort. Visit an electric range dealer or our nearest office today.

Enjoy a refreshing bath ANY TIME!

A hot bath is the most cooling bath you can take. And when you have an automatic electric water heater, you can bathe any time you desire for there's plenty of hot water on tap. Your house doesn't become overheated through keeping up a range or furnace fire. You don't have to remember to light or turn off your heater. Your hot water supply is as automatic as your cold water supply. Ask us to tell you more about electric hot water service... and about our low water heating rate.
