Willow Creek Flood FOR PHONES READY **Control Rests on** House Calendar

Is Included in Omnibus Bill; Pierce Believes Chances Good

That the matter of flood control on Willow creek is not dead was the good news received this week by P. W. Mahoney from Walter M. Pierce, eastern Oregon congressman. In answer to Mr. Mahoney's query as to the status of legislation asking for an appropriation with which to make a preliminary survey of the project, Mr. Pierce wrote:

"Willow creek is included in the omnibus bill for flood control which has been reported out by the committee and is now on the House calendar. I expect it will pass. It is my bill, and naturally I am watching it with a good deal of care."

The bill recommends an appropriation of \$5000 for the purpose of making a detailed survey of Willow and Rhea creeks with a view to future control of floods. It was drawn after recommendation for such an amount by the board of army engineers on a review of a preliminary survey made under the direction of the district army engineer. The review of the preliminary survey found that measures of flood control by construction of reservoirs seemed feasible, and that there appeared possibility of utilizing stored water for irrigation purposes.

One of the irrefutable arguments for flood control measures on these creeks is the recollection of the Heppner flood of June 14, 1903, which took a toll of 221 lives besides thousands of dollars in property damage, local people believe.

Mr. Mahoney has acted as chairman of a local citizens' committee to work in the interests of flood control work, and assisted in lobbying for a measure before the last legislature which povides for voluntary organization of flood control districts. Such better cooperation is needed. procedure may be taken if and when the detailed survey is made, so that the proper set-up will be had to pro-

Lexington Calls to be Cleared Through Heppner Exchange **Beginning Next Thursday**

Installation of the new telephone switchboard for Lexington telephone customers will be completed within the next few days, and will be placed in service Thursday, July 29, according to J. R. Farrington, manager of the Pacific Telephone and Telegraph company.

With the placing in service of the new equipment, Lexington telephone users will be given full-time, 24 hours a day, telephone service.

The new Lexington switchboard, one of the few of its kind on the Pacific coast, is technically known as 28th. an R. C. X. (remote control exchange) and is connected with the Heppner exhange.

Lexington city customers in making calls will hear the Heppner opfarmer line customers will ring in hand. twice to get the Heppner operator, and then will place their calls with her.

Mrs. Bertha Hunt, agency manager at Lexington, will become payment agent, and will handle collections of bills as in the past. Lexington customers in wanting telephone installations, or having business other than payment of bills with the telephone company, will deal with the Heppner office.

No change is being made in the personnel of the Heppner telephone office, nor will there be any change in the telephone service of Heppner customers.

County Agent Asks Farmer Cooperation

The county agent's office is equipped to give farm operators service in supplying employment needs, said Joseph Belanger this morning,

Bids for Street Surfacing Will be **Opened August 9**

Reservoir Repair, Fixing Lot for Parking Before Council

Bids for Heppner's street surfacing project will be opened August 9, according to advertisement appearing in another column. Authorization for the advertisement was given by the council Monday evening after a final review of the plans and specifications with Frank Hayes, Pendleton engineer.

At Monday evening's session, also, it was decided to try out a weedburning machine for clearing streets and vacant lots of the annual weed fire menace; to advertise for bids the hill above the reservoir now in use, and to investigate the matter of fixing up the vacant lot next to the Masonic building on Main street for car parking, with consent of the

The street surfacing specifications call for commencement of work within fifteen days after signing of contract, and it is expected to have the work pushed as fast as possible. It is estimated that six weeks should be sufficient time to complete the work.

Specifications call for laying bituminous oil and rock surfacing. The existing base will be rolled and leveled, and covered with two applications of rock and oil, with seal coating on each application. The completed oil and rock mat will be 1 1-8 and 5-8 inches thick. Coarse gravel will be used in each first applicalotted and made loan contract for tion, rolled, covered with oil and \$129,000 by the Rural Electrification finer rock top dressing, then rolled again.

The width of the surfacing will vary with width of streets, being as wide as thirty feet on the wider

Lightning Sets Fires in Forest; Danger Rises

Three lightning-set fires were reported in the local forest district last week end in an electrical storm which gave the forest regions of Oregon and Washington their first large bitter taste of the devil-tongued demon this season. All fires in the local district were put under control quickly, and all conflagrations outside were reported under control the first of the week.

Fire danger in the forest is increasing daily with present warm weather, reports F. F. Wehmeyer, ranger in charge of the local district. While the higher regions are still quite green, too much precaution cannot be taken by those entering the forest and whole-hearted public cooperation may result in averting any major catastrophe.

In this issue appears a closing order from Governor Martin for some districts included in the local forest protective area, to which Mr. Wehmeyer directs special attention.

Mr. and Mrs. Ralph Moore arrived in Heppner yesterday from Montana where Mr. Moore was with the Bub Clark shearing outfit through the shearing season. Winding up at Helena, they took a motor trip through Glacier national park before returning home.
