Myles Martin was a business visitor in Moro last week.

A large group of 4-H club boys and girls departed Saturday for the state fair in Salem.

Glenn Thompson, who makes his

home with his sister and brother-in-law, Mr. and Mrs. Elmer Hunt, departed for Eugene Wednesday where he will enter college.

Willard Martin has gone to Moro to haul wheat.

Church will be held at eleven a. m. Sunday in the Congregational church. C. E. is to be held Sunday evening at 7:30 o'clock. Everyone is welcome.

Mrs. Peggy Aiken and son Jack went to Portland Sunday where Mrs. Aiken took her son to enter the Henry Military school for the coming school year.

KILL SMUT GERMS

—Increase Yield; Reduce Dockage

Why take chances with your grain crop? Government reports show substantial increases in yield from treated seed. Bigger crops, plus reduced dockage, makes it downright profitable to treat seed! Use BASUL—the new Basic Copper Sulphate that offers dependable, easy control at lower cost!

Grain growers and experiment stations approve S-W BASUL

"... among the most practical dust fungicides for bunt control on the market in the U.S.," says the Department of Agriculture Bulletin No. 582 about this type of treatment. BASUL gives you these eight advantages:

1. **COSTS LESS**—Requires only 2 ounces per bushel; cost less than copper carbonate. (It is a true basic copper sulphate not a copper carbonate.)
2. **PROVED CONTROL**—No "guessing" when you use BASUL. You KNOW your crop is safe from smut. BASUL contains 52% metallic copper; ground to a fine powder, which adheres extremely well to the grains.
3. **CONVENIENCE**—BASUL has eliminated all the objectionable features of old-fashioned treatments; easily, quickly applied.
4. **WON'T "SET" IN DRILL**—BASUL-treated grain goes through the drill as smoothly as though the grain had never been treated.
5. **LONG EFFECTIVENESS**—You can store BASUL-treated grain for months without injury or without destroying effectiveness of the application.
6. **PERFECT GERMINATION**—Experiment Station reports and growers' experience proves that BASUL does not interfere with seed germination.
7. **APPLIED WITH STANDARD EQUIPMENT**—In applying BASUL, use same equipment recommended for application of any dust-type treatment.
8. **DEPENDABILITY**—BASUL is made by the Sherwin-Williams Co., one of the world's largest producers of spray and dust materials. It is for the grower who wants dependable control at lowest possible cost.
