Station Financing By Interior Dept. Set

A definite financing program for the operation of the Squaw Butte regional range experiment station has just been arranged between the department of the interior and the agricultural experiment station at Oregon State college. Under the agreement, the interior department will provide \$10,000 a year towards the operation of the big 15,000-acre station, partly in the form of cash and partly as contributed services, according to announcement made by Wm. A. Schoenfeld, dean of agriculture at OSC.

The station will be used as originally planned to carry on research on the rehabilitation and management of range lands for a large part

of the western states range area. The experiment station is already equipped with permanent fencing and other facilities, and has been stocked with cattle.

The funds from the interior department will be dispersed through Marvin Klemme, regional grazier, with headquarters at Burns, but only on order from the experiment station. R. G. Johnson, professor of animal husbandry, is acting superintendent of the station, while Robert Frictell is resident research assistant and foreman.

How to Make Catsup Stay Red Told

Homemakers who like to make their own catsup are often disappointed to have it turn out brownish in color, rather than an attractive red like the commercial product.

A few suggestions which, if followed, will help in retaining the original red color of the tomato juice are offered by Miss Lucy Case, extension specialist in foods and nutrition at Oregon State college. The first essential is to use sound, fresh, ripe tomatoes, and remove all yellow or green spots. Cook them in an enamelware, earthenware or aluminum kettle, as iron discolors tomatoes. A shallow kettle and rapid cooking is also recommended.

Whole spices, tied in a cloth bag which can be removed before bottling are best, avoiding powdered spices. Paprika and red pepper help to give a bright red color, while allspice, black pepper and cloves darken catsup. If clove flavor is desired, use a small amount of oil of cloves. Add sugar and salt only five minutes before the catsup is finished, as they tend to darken the color if added early in the cooking.
