FRESHMAN RECORD SET

Oregon State College.—Registration of new students during freshman week exceeded all previous records by about 10 percent, and early enrollment of former students indicated a total student body somewhat larger than last year. Enrollment of new students reached 1622 compared with 1471 last year. Of these 1346 were entering college for the first time and 276 were transfers from other institutions. The final freshman class total last fall was 1504, a figure certain to be exceeded this term, says E. B. Lemon, registrar.

HOW TO AVOID WAR

Aggressor nations attack only when they think they can win. Here are some facts that should discourage such ambitions toward the United States

The same bomber can fly 30% faster and farther in the United States than in Europe. It can carry 20% more bombs.

Why? Because in America we manufacture 100 octane aviation gasoline in quantity—a thing no other nation can do!

But that's only half the story. America's oil companies can expand their refineries to provide aviation fuel for 50,000 planes, or even more, faster than the planes can be built.

Is There Enough Crude Oil?

Yes, thanks to the industry's voluntary conservation program, Pacific Coast wells are operating far below capacity.

No other country in the world can even begin to support a modern mechanized army on its domestic production of petroleum. But the United States can, because we have over half the proved oil reserves of the world.

The Pacific Coast by itself can supply the Navy—even a two ocean Navy—with all the fuel oil, diesel oil and specialized greases it will ever need.

Rubber and Explosives from Oil

Synthetic Rubber. Developed by petroleum research chemists, is now being produced in commercial quantities in cooperation with the large rubber manufacturers. Before our present supply of natural rubber is exhausted, the U. S. can be made 100% self-sufficient with rubber made from oil.

Explosives. The petroleum industry has signed contracts with the War Department to produce 60,000,000 gallons a year of toluene, the basic ingredient of TNT. Glycerine is being made in even greater quantities. Production of both these vital materials can be expanded to the requirements of new explosive plants as fast as the plants can be built.

The way to avoid war is to make America self-sufficient—make America strong.

The petroleum industry, on its own initiative and without government subsidy, has prepared itself to do its part without delay in a national emergency.

America's defense will never be "grounded." Petroleum will never let her down.

A report to the public on the PACIFIC COAST PETROLEUM INDUSTRY

Three-quarters of a million people in all parts of the Pacific Coast depend on this industry for their living.
