With more than 60 per cent of their efforts devoted to defense work, General Electric workmen, scientists, and engineers are in the front rank of America's defenders.

1. The U.S. Army carries pack howitzers wherever man and mule can go. General Electric is making them on machines that once made electric motors.

2. Big as a house is a battleship's transmission. General Electric made the gears, and the turbines that drive them, for four U.S. battleships launched recently.

3. Plane engines smothered for lack of air at high altitudes until the turbosupercharger, largely developed by G-E engineers, enabled them to fly seven miles up.

4. You depend on your radio for entertainment, but in the Army and Navy lives depend on radio communication. General Electric makes sets for the Signal Corps.

General Electric believes that its first duty as a good citizen is to be a good soldier. General Electric Company, Schenectady, N. Y.
