War Bond Buying On Wider Scale Proposed Here

Continued from First Page
for months was suggested as the most feasible method of determining which group should handle each program.

In presenting his proposition, Snyder dwelt at some length upon the mechanics of bond and stamp sales, pointing out that up to the present a large percentage of sales have been made to a comparatively small percentage of buyers. This, he stated, is contrary to the original purpose of the bonds, which should be called stabilization bonds instead of war or victory bonds. Remembering the hectic days immediately following World War I when millions of young men returned to civil life without jobs and again during the depression days of the '30's, the war finance committee concluded something should be done in the present crisis to prepare the people for peace. Thus the small bond and stamp program was set up to make it possible for the small wage earner to invest savings at a fair rate of interest so that when war ceases and the present high geared war industrial machine is slowed down the people will have something to tide them over what may prove to be a considerable period of readjustment.

Another point brought out by the speaker was to the effect that the government this year has borrowed \$48,000,000,000 to carry on the war. Money is plentiful and things to buy are growing scarcer every day. For that reason it is suggested that wage earners invest those dollars they might otherwise spend for luxuries and things they think essential and which are rapidly going off the market in stamps and bonds, holding them in reserve until the time comes when they once more may buy commodities.
