INSTRUCTIONS.—To find the Point Value of an item:
 1. Find out the net weight of the contents (from the label, if any).
 2. In the line across the top of the chart, showing the weight in ounces and pounds, find the column in which this weight belongs.
 3. Find the item in the listing of items in the column to the left.
 4. The POINT VALUE of the item appears on the same line as the item and in the column listing the correct weight.
 All Point Values must be determined by weights. If no weight is marked on the item, the item must be weighed.
 In finding the Point Value of a container where contents are given in fluid ounces, consider the fluid ounce to be the same as the avoirdupois weight ounce. One pint is one pound; one quart is two pounds.

The Point Value of any item weighing over four (4) pounds shall be arrived at by multiplying the number of pounds of that item by the Point Value per pound of that item as given in the "Per Pound" column. Fractions of a pound should be figured in quarter-pounds. Fractions of a quarter-pound should be figured to the next higher quarter-pound. Thus, an item weighing 4 pounds 9 ounces would be considered as weighing 4 pounds 12 ounces for the purpose of getting the Point Value of the item.
