TONS OF TROUBLE

If your car has hypoid gears, pressures against gear teeth sometimes skyrocket to thousands of pounds per square inch. That's potential trouble if you haven't a gear lubricant built to take those pressures. Each type of transmission and differential requires a special lubricant, designed for its particular problems. Save trouble, repair bills—ask your Standard Man which of these you should use:

RPM GEAR LUBRICANT (COMPOUNDED)
For all transmissions and differentials (hypoids excepted) . . . minimizes wear, resists sludging, foaming, corrosion.

RPM GEAR OIL
For truck transmissions and rear axles that require an uncompounded gear oil . . . built for extra hard duty, resists foaming.

RPM HYPOID LUBRICANTS
Special grades for trucks and cars . . . specially compounded for extreme hypoid pressures. Specify whether you want passenger car or truck type Hypoid Lubricant.

ZEROLENE GEAR OIL
A straight mineral oil for lubrication of gears that do not require an extreme-pressure type of lubricant.
