

Machinery Quota Allotted Farmers

Morrow county machinery rationing committee met Tuesday and Wednesday of this week and completed the difficult job of allotting rationed machinery to farmers throughout the county who have made application for it. In very few cases was there enough machinery to fill all the applications and the committee found it difficult to de-

termine which applicant would make the greatest use of the machinery.

Word has been received from the state war board that a small amount of additional machinery can be expected in most of the rationed classes and those who have failed to put in their applications for machinery may still have a chance to obtain some if it is badly needed.

All schedule 1 equipment, that is on a quota basis, was allotted with

the exception of 6 mowers, which the committee feels will be applied for before haying season.

The machinery situation is better this year and types of farm machinery that were on a quota basis in 1943 are not so rationed in 1944.

BROTHER DIES

Mrs. Anna Heiny was called to Portland Tuesday by the death of her brother. She will return Saturday to resume teaching at the Eight Mile school.

Farm Stored Wheat Should Be Checked

Farm stored wheat which is under loan with the Commodity Credit corporation should be checked during the next few weeks to determine whether the wheat is in good condition. Any farmer finding the wheat infested with weevil, damp, moldy, heating or otherwise going out of condition, should notify the county AAA committee im-

mediately, it is stated.

Some loss has occurred in past years from leaky roofs or from moisture in the bins due to water standing around the base. Such conditions can be avoided if a close check is kept on farm storage bins.

Farmers who have farm loans on their wheat are reminded that they are responsible for the condition of the wheat and should take all necessary steps to keep the wheat in condition to avoid loss.

No job for a Sissy... ...invasion supplies are packed in wood!

ANOTHER WAY THE PACIFIC NORTHWEST IS

HELPING THE FIGHTING FORCES

A billion board feet of finished boxes and crating are this year's demands on Oregon and Washington mills...

Think of it! That's forty thousand carloads of Northwest lumber—just to carry ammunition, food, repair parts and other vital war supplies. It gives you an idea of the immensity of the job that men in the lumber industry have faced since the first shot was fired at Pearl Harbor.

Even more Northwest lumber is being used constantly for the production of life boats, landing barges, hutments and other field structures of all kinds.

It isn't any wonder that this industry is considered one of the most important on the home front today.

Helping Northwest lumbermen do their jobs faster, better and cheaper has been one of our big responsibilities for over 33 years. Today, we are glad that this backlog of experience is making shorter work of the *new* problems that come up—not only in providing dependable electricity to meet war needs in the lumber industry, but in machine shops, shipyards, airfields, army camps and homes.
