MILLIONS of American families are making post-war plans—for new or better homes.

A million new homes a year, for 10 years, is the estimate of the construction industry's job as soon as the war ends.

And wood will be ready to go to work, for you, without delay. The construction industry, from tree in the forest to carpenter on the job, needs no retooling. It can turn, immediately, from the tasks of war to the requirements of peace. At least two million men will be employed building homes and other structures for America.

Are your plans ready?

THE FORESTS—CONSTANTLY RENEWING THEMSELVES—WILL BE READY.

Forest Fact!
Enough new wood grows in commercially operated American forests to build a new six-room house for every U. S. family every four years.
