48.23 6.15 GET CANNING EQUIPMENT READY EARLY

10.00 5.21 The advice to shop early and avoid the rush applies just as much to homemakers preparing for the canning season as it does to Christmas shoppers. reminds Miss Lucy A. Case, O. S. C. extension nutritionist.

42.02 29.87 10.00 15.68 Manufacturers of pressure cookers especially can fill orders for replacements such as gauges, gaskets and safety valve springs much more promptly now than in the rush of the summer season. Manufacturers have been authorized to make 400,000 new aluminum pressure cookers with dial gauges for use this year, which, while good news, may delay filling of orders for spare parts during the peak of production.

6.08 161.01 28.00 8.00 180.96 113.83 7.00 328.00

Miss Case recommends examining the cooker to see if all screws and lugs are in good condition, if the

AAA DEADLINE EXTENDED

The closing date for making application for payment for conservation practices performed under the 1943 AAA program has been extended until April 30, according to an announcement received by the county AAA committee. This 30-day extension should give all county farmers who have not done so full opportunity to file reports of performance and sign their applications.

petcock is working, and if the gauge has had its annual test. The food industries department at Oregon State college is again offering to test these pressure cooker gauges at the usual nominal charge. They may be mailed directly to the food industries department at the college or be sent through any home demonstration or county agents.

Miss Case adds that the pressure cooker may well be examined to see that the safety valve spring releases steam at around 20 pounds pressure, that the ball is free of erosion, that handles are secure, and that gaskets, if any, prevent leakage of steam. A rack for the cooker that will hold pint jars is an added convenience.

Farts can frequently be obtained from the local dealer, who is also sometimes equipped to conduct various tests.

## We Are Proud of Our Boy Scouts

Yes, we are proud of our Boy Scouts and glad for the opportunity to give the Scout program a boost. Our troop is young, but growing, and the least we can do is to provide funds to insure continued growth and activity.

We are safe in saying that Ione will do its share in supporting the Blue Mountain Council in the splendid work it is doing among our boys. The campaign opens Monday, April 17 and runs through Wednesday, April 19.

## Science in the News

By ORSON D. MUNN, Litt.B., LL.B., Sc.D.  
Editor, Scientific American

When the OPA ruling was recently made that meat ration points would be given in exchange for used fats, there may have been some misunderstanding of the reason for this move. The points were not offered as a premium on patriotism, a bonus, or a prize. There was no thought of bribing the women of the nation to cooperate in time of peril. Rather, the points were offered as a means of increasing the amount of fat coming into our economy, and thus take the strain off our supply of edible fats.

Orson D. Munn

In order to appreciate fully the need for fat salvage today, it is necessary to look into a phase of world-wide economy that is too often forgotten. Fats—and in this general group must be included both fats and oils since they are practically the same—are extensively used in the industrial production of many things necessary in both peace and war. These fats may be of animal or vegetable origin. To the chemist, it makes little difference where he gets his fats. With either type he can, in most cases, reach his goal.

Some of the greatest fat producing areas of the world are centered in the Far East. From that area came palm and other oils to the extent of over 700,000 tons annually. Now, however, with these import areas cut off from the rest of the world by the Japs, we are forced to fall back upon other supplies.

American kitchens, therefore, have come to the front with a vengeance. From these kitchens, with the help of the American housewife, can be salvaged millions of

pounds of used fat every year. And every pound, every teaspoonful, in fact, is needed as these United States never needed anything in the past.

For these used fats, after they have served their purpose in the home and are no longer usable for food or in cooking, can be turned back into the national economy to serve a number of useful ends. The fat that you save and deliver to your meat dealer in exchange for cash and meat ration points may reappear in the form of life-giving medical supplies or in ammunition. Or it may go into the channels of industry where it will be used in the manufacture of textiles for parachutes, clothing and so on. The production of tin plate, paints, leather goods and hundreds of other necessary items requires fats in some phase of their preparation.

It is a far cry from the oil-producing palm trees of the South Pacific to the kitchen of the average home, but there is a common bond—fat needed in peace and war. With the oil products of the Pacific no longer accessible, and with other sources of fats cut off or overworked, the American kitchen must come to the fore to do its share. Fat conservation is essential on the home front, in order that the battlefield be kept moving forward.

And, remember, your used kitchen fat may some day save the life of an American soldier, sailor or marine on a far-off battlefield when it appears as an essential ingredient of needed medicine or munitions.

IT'S AMAZING—Just See How Many Ways

# ACID-O

CAN SAVE YOU MONEY AND MATERIALS

The timely use of ACID-O can save a number of things you formerly threw away or had to replace because of rust, leakage or weathering. Do the wise and practical thing—SAVE with ACID-O. It costs so little, comes all prepared and ready to use. Full directions on the label.
