PREVENTION

THERE'S a whale of a difference between a broken match and one that isn't.

You *know* the broken match is out. You may not be quite sure about the other.

But *this* is sure:

If a blazing match lights on an inflammable forest "floor", you have the start of another forest fire. In five years ending in 1939, there was an average of 79,069 forest fires in the United States every year. More than three-quarters of them were man-caused.

All of us **PAY** for forest fires

- - - most of us can **PREVENT** them
