The high cost of living

The low price of electricity

LOOK AT THE COST OF LIVING—up 25.4% since 1939\* Then look at the average kilowatt-hour price of P.P.&L. electricity—down 21% for residential service during the same period!

Part of this reduction in the average cost of electricity is due to increased use of electrical helpers, which automatically moves users into the lower steps of our progressive rate schedules. But even more important have been the three rate reductions and the two "rate dividends" received by our customers in the past five years.

These forward steps have cut the average price we get for residential electric service from 2.36 cents per kilowatt-hour in 1939 to only 1.86 cents at the present time.

And compared with 15 years ago, the average home served by P.P.&L. is now using about twice as much electricity—at no more cost.

The actual record of steady reduction in the cost of your electric service is your assurance of continued better value in the future.
