Burner Oil Users... WAR ON WASTE!

Oil fights for freedom... every possible drop must be conserved for essential war use. Here's how you can do your part to save and serve.

7 Practical Ideas for "Waste Chasers"

1. Avoid overheating. 65° is recommended.
2. Weatherstrip doors and windows.
3. Close off unused rooms.
4. Make sure thermostat is accurate.
5. Close fireplace damper when not in use.
6. Lower heat at night or when away.
7. Keep humidifiers full.

BUILDING FOR WAR

When the navy needed mammoth hangars for its blimps, it chose wood. These huge wooden structures, largest in the world, indicate the capacity of wood as a construction material.

"TIMBER ENGINEERING" is a big term to describe a big fact. Requirements of war have taught us new facts about timber and have proved wood capable of meeting the utmost structural demands.

In all lines, chemical as well as structural, wood is demonstrating its versatility. It is the raw material not only of lumber but of paper, textiles, explosives, chemicals, many types of fabricated materials.

It is fortunate that such a vital resource grows in successive crops. Many American acres are yielding their second, third and even fourth harvests of trees. Private industry and public agencies are working together to prevent fire, protect forest lands, and increase the size of their harvests.
