\$400,000,000 construction program under way on the Pacific Coast

During the next five years, a four hundred million dollar construction program is planned to improve and expand telephone service on the Pacific Coast.

This program is already under way and is going ahead steadily.

In 1946 alone, more than 70 building projects, installation of eight billion feet of wire in exchange cable and construction of 200,000 miles of toll and long distance circuits are expected to be completed. Work will be started on the Western part of a nation-wide coaxial cable network for long distance and television transmission, and in the next few years many new services and improvements will be introduced.

For it is our purpose to grow with the West and to help the West grow—to provide an ever-widening, ever-improving telephone service.
