Everybody Welcome

How desert winds help speed your voice across country

Above the desert floor we sometimes use wind-driven generators to supply power for long distance amplifying stations miles away from electric lines. When the wind dies, gasoline motors take over to charge the batteries at these repeater stations that give a "boost" to your voice as it journeys with the speed of light across the country.

"Here is your party" is the phrase our long distance operators are using more often these days. For calls East are going through faster now. To give complete service to the many new telephones we're adding, we must build more "speech highways"—all parts of the telephone system must grow.

It takes new Working Dollars ... millions of them ... to build buildings and buy equipment needed to meet the demand for more service. They do not come from telephone bills, but from people who put their savings into the business. And to get new working dollars we must sell our services at fair prices which allow us to pay reasonably for the use of their savings.
