### 1948 LICENSES BEING MAILED TO ISSUING AGENCIES BY GAME COMMISSION

The 1948 game licenses are being mailed out by the Oregon State Game commission to license agencies throughout the state and will be available to purchasers by approximately December 20. Deer tags, however, which will be issued separately for a fee of fifty cents to residents

will not be available until after the first of July.

An entirely new form of license is being issued this year, made possible by the separation of the deer tag from the hunting license. License agents will be issued one form of license only, instead of eight kinds as heretofore, and will fill in on this form information as to type of license being issued, amount paid and name, address and description of purchaser. The new

form of license is printed on safety paper in manifold form and is expected to save a considerable amount of time and money in the printing and handling of game licenses.

The separate deer tag is to be used for obtaining information essential to proper management of the deer herds, such as the total number of deer hunters, total kill, areas hunted most heavily, time of heaviest kill and other factors.

## How Many of Us Are Farmers Today

One third of our population?

One fourth?—One sixth?

Answer: One sixth

A total of 26 million persons on American farms feed themselves and the other 116 million of us, in addition to millions abroad.

It wasn't always this way. Nearly every American was a farmer 150 years ago, because it took most of his time to raise enough food for his family.

But since then improved equipment and methods have enabled each farmer to produce more and thus release more and more workers to produce other raw materials, machinery and services.

Agricultural progress made possible our industrial expansion. Together they gave us the highest standard of living in the world.

Since the first steel plow in 1687, progress in steel and in farm production have gone hand in hand.
