Junior Fellowship, 6:30 p.m.
Senior Fellowship, 7:30 p.m.

News From C. A. Office

Many farmers are asking questions about weed control these days and a spirited drive is being made by chemical and equipment manufacturers to sell 2,4-D and equipment with which to apply it.

A word of caution is given by this office to farmers who plan to buy this winter and spring. First, investigate the company who is selling such materials. There are many good reliable dealers in chemicals and equipment. Yet there are always a few that are trying to make money fast rather than sell materials and equipment that are thoroughly tested and proven. Companies with only a year or two experience in the manufacturing field are generally not in the position to provide quality materials like an older firm.

Second, when purchasing equipment, make sure it will meet qualifications for thorough application. In purchasing a sprayer be sure that it is capable of spraying at least 10 gallons of liquid per acre. Lower applications are not recommended by experiment stations. Oregon State college or reliable chemical or equipment companies who have experimented with application.
A final word of caution, which applies to not only chemical and equipment sales is to watch out for high pressured salesmen who have a product to sell.

E. R. Jackman, long-time farm crops specialist at Oregon State college, claims the good life isn't found in the large cities of the country. He says to look to the small towns for color and interest.

In fact, Jackman attempts to prove his point in an article which will be printed in the January 31 issue of the Saturday Evening Post.
Burns, Oregon, is the town he uses as a case in point.
In telling about the life in Burns, Jackman takes the part of the eastern Oregon stockman describing his way of life and character. Many incidents using names of actual persons gives the article a true eastern Oregon flavor.
Many of Jackman's arguments in favor of the small town way of life are illustrated with humorous anecdotes which makes the story about Burns as refreshing as an eastern Oregon breeze.

The U. S. department of agriculture has estimated that cattle grubs cause a loss of from 50 to 100 million dollars annually. This is the loss represented in wasted meat trimmed from grubby carcasses and the loss in damaged hides. Buyers the country over make a reduction on purchases of grubby animals because they know there will be a loss in meat and hides. Not all ranchers are aware they are being thus penalized when selling their grubby animals. We have first-hand information showing that grubby cattle normally suffer a price concession of about 50c per cwt. This price concession of 50c per cwt. applies during periods of normal receipts, but during periods of heavy receipts buyers are naturally more selective and would be inclined to pass infested animals in preference to grub-free animals. There have been many instances when grubby cattle do not receive a bid until late in the day and often penalized

as much as \$1 per cwt. The penalty reflects the situation encountered in beef coolers where grubby carcasses are normally penalized around \$1 per cwt. and the loss in damaged hides which are substantially reduced in value because of their damaged condition. The above cited loss does not take into consideration the less tangible consideration of reduced weight gains due to the presence of grubs or the running of cattle by the adult heel fly. Buyers of feeder cattle are reported to be giving more and more consideration to the origin of the cattle they purchase and whether they came from areas known to be heavily infested with grubs or if the cattle came from areas treating for grub control.

Rotonone is the only insecticide now being recommended for the control of cattle grubs. Recent checks on Morrow county cattle show that in the lower part of the county it is now time to treat for grubs. The cattle in the higher country will be ready to treat shortly after February 1st as it now appears. A repeat treatment should be made 30 days later.

In treating for grubs there are two methods commonly used in Morrow county. Dusting—use about 3 ounces of 5% rotonone per animal, dusting well into the hair over the grubs. Spraying: use seven and one-half pounds of 5% rotonone powder in 100 gallons of water. Spray with 400 pounds pressure with nozzle 10 to 12 inches above the back of the animal.
Commercial liquid rotonone concentrates are available locally. If these are used instructions on the package should be followed.

Arrangements were made this past week whereby a carload of nitrogen fertilizer was shipped into Ione for distribution to farmers. The fertilizer will be used by farmers for application on dry land wheat as well as irrigated pastures and legume seedings.
A few tons of this nitrogen fertilizer is available if anyone is interested in using some.

Have you started to keep your farm account records for 1948? If not, now is a good time to get a record book from the county agent's office and begin your records at once.

WHEAT PROSPECTS EXCELLENT

Moisture prospects for the 1948 wheat crop in eastern Oregon are described as excellent. At least for this time of the year. In fact, some county agricultural agents from Oregon's bread basket recently described the moisture conditions for January as the best they have seen for the past five or six years.
However, along with heavy rains recently, there has been considerable water erosion damage to wheat lands in their sections. Assistant County Agents LeRoy Fuller and Lee Foster of Umatilla county, say that little washing or gulying occurred on land in that county which was in peas or wheat last year, then fall plowed and left rough for spring

planting. Summerfallow land in 1947 which was not weeded before fall planting to wheat was not badly damaged.
But there was damage to Umatilla wheat lands as a result of recent heavy rains. The assistant agents state that summerfallow sections which were worked down too fine and seeded late in the fall are the lands which show the most washing. Especially on the steeper slopes.

The Union county agricultural agent, R. M. Schaad, reports a formula which has prevented blowing in the wheat lands of his county. Schaad says farmers who have applied nitrogen fertilizer to wheat stubble and incorporated the straw into the top few inches of the soil surface have escaped

BURNS BY JACKMAN TO BE FEATURED SOON IN POST
The little city of Burns, Ore., will break into the national spotlight in the pages of the January 31 issue of Saturday Evening Post as the result of the successful effort of E. R. Jackman, O.S.C. extension farm crops specialist, to get a "break" for America's small towns.
Jackman, who has worked in rural Oregon for close to 28 years, wind erosion damage.

Soil moisture conditions might be excellent now but when the combines begin to roll is still six months away. About July, in fact. In the meantime, the county agent says weeds, insects and a spring drought could change the wheat picture considerably.

offered Editor Ben Hibbs of the Post a story of Burns as a part of the series of American cities that magazine has been running for the past year or so.
"Even a hasty survey of our literature and art seems to indicate that if we have any truly national culture it stems from the small town and the nearby farm," says Jackman. "There individuality grows, flowers and bears fruit—sometimes just odd, other times laughable, but always interesting."
The article, to be well illustrated, consists mostly of anecdotes that Jackman has accumulated around Burns and elsewhere which he recounts in illustrating various phases of everyday life in this part of rural Oregon.

CHEVROLET and ONLY Chevrolet IS FIRST!

FIRST in PRODUCTION, in SALES and in REGISTRATIONS of cars and of trucks . . .

- FIRST** in Passenger Car Production in 1947—according to published production figures.
- FIRST** in Truck Production in 1947—according to published production figures.
- FIRST** in Passenger Car Sales in 1947—according to incomplete but conclusive sales records.
- FIRST** in Truck Sales in 1947—according to incomplete but conclusive sales records.
- FIRST** to Produce over a Million Cars and Trucks in a postwar year, 1947—according to published production figures.
- FIRST** in Total Passenger Car Production and Sales for the total 17-year period, January, 1931 to January, 1948—according to published nation-wide figures.
- FIRST** in Total Truck Production and Sales for the total 17-year period, January, 1931 to January, 1948—according to published nation-wide figures.
- FIRST** in Total Number of Cars and Trucks on the road today—according to official nation-wide registrations.

WE, YOUR LOCAL CHEVROLET DEALER—and every other Chevrolet dealer in America—are both proud and happy to make the following report to buyers and prospective buyers of Chevrolet products.
Again in 1947, Chevrolet built and sold more cars and more trucks than any other maker in the industry, just as Chevrolet has built and sold more cars and more trucks than any other maker for the total seventeen-year period, dating from January, 1931 to January, 1948—the modern period of motor car history.
Naturally, we as well as the Chevrolet Motor Division of General Motors are deeply grateful for America's outspoken preference for Chevrolet passenger cars and trucks and we are determined to do everything in our power to continue to deserve this preference in the future as in the past.
We want to thank each and every person in this community for his friendship and goodwill for this organization. We solicit and appreciate your patronage. We are doing our level best to prove that, by filling orders for new Chevrolets just as promptly as we can—even under today's trying conditions—and we are deeply and doubly appreciative of the patience and understanding of all our customers who are awaiting deliveries of new Chevrolets.
Needless to say, you buy wisely when you buy the product of the world's largest producers of cars and trucks, for that is the way to maximum dollar value! Rest assured that we'll fill your order for a new Chevrolet just as soon as it is humanly possible to do so. Meanwhile, please let us help to keep your present car or truck in good running condition by bringing it to us for skilled service, now and at regular intervals.

Where Do People Live the Best?

Russia?
England?
United States?

The answer: The U. S.
We are better fed, better clothed, and have more automobiles, refrigerators, telephones, and radios per capita than any other country.
Why? One reason is the efficiency of the American farmer. In countries where farm production is low, the standard of living is low.

The American farmer represents only 2 1/2 per cent of the world's farmers, yet he produces approximately 20 per cent of the world's food supply.
Steel production also is an accurate measure of living standards. America, with only 7 per cent of the world's population, produces 50 per cent of the world's steel.
