Complete ENGINE RECONDITIONING

Renew Performance
Economy and Dependability

REBORE AND HONE CYLINDERS
Precision boring removes cylinder taper and trues the cylinder wall. After boring, the cylinders are honed smooth to minimize wear.

FIT NEW PISTONS, PINS AND RINGS
Genuine Chevrolet replacement parts are perfectly fitted to the cylinder bores. This assures even compression and low oil consumption, full power and reduced wear.

GRIND VALVES
Refacing and resetting the valves provides quiet operation and aids economy. Proper valve action is essential to good engine performance.

ADJUST MAIN AND ROD BEARINGS
All engine bearings are examined for wear and adjusted for proper clearance. Quiet operation, longer wear and better lubrication are assured.

OVERHAUL STARTER AND GENERATOR
The electrical system must be in A-1 shape for good engine performance. A reconditioned generator assures maximum current output. Quick and positive starting requires a fully-charged battery and a reconditioned starting motor.

OVERHAUL CARBURETOR
A clean, properly calibrated carburetor balances the flow of fuel to the reconditioned engine for maximum gas economy and engine performance.

CLEAN AND FLUSH COOLING SYSTEM
Even distribution of engine heat and temperature control affect engine operation. A clean cooling system is protection against overheating and leakage.

TUNE ENGINE
A reconditioned engine with all adjustments made to factory specifications means better performance and economy. Our expert mechanics and equipment tune reconditioned engines to a "T."
