What! A Power Plant on Top of a Pole?

Yes, sonny, capacitors are in effect little power plants, because they boost the supply of usable electricity on power lines. This year Pacific Power will install 1600 capacitors on pole tops throughout its system. These ingenious little devices will make available about 10,000 kilowatts of additional capacity from existing generators.

THIS GROWING REGION USES MORE AND MORE OF PP&L's CHEAP ELECTRICITY!

Electric rates here are the lowest in history—less than half the national average
