NOTICE TO CREDITORS
Notice is hereby given that the undersigned has been duly appointed administrator of the estate of Wm. Greener, by the Probate Court of the State of Oregon for the County of Morrow, and has accepted such office. All persons having claims against said estate are hereby required to present the same to the administrator at the office of J. O. Turner in Heppner, Oregon, within six months from the date of this notice. Dated and first published this 20th day of May, 1948. EDW. H. FREUDENTHAL, Administrator et al.

News From C. A. Office

County Agent Nelson Anderson is attending 4-H summer school on the Oregon State College campus at Corvallis this week, where he is assisting with classes and recreation of the 1800 4-H club members gathered there for the past two weeks.
Morrow county has a delegation of 22 4-H club members and two leaders who will return today.
All citizens of the country share the responsibility of conserving the nation's soil and water resources, because many farmers are not able to finance the needed conservation work on their farms, says E. Harvey Miller, chairman of the Oregon state PMA committee.
Even in 1944, he points out, nearly a third of the nation's farms each grew less than \$1,000 worth of products. Nearly 60 per cent turned out less than \$2,000 worth of products. Nearly three-fourths grew less than \$3,000 worth of products. The operators of these farms took in much less cash than these indicated figures—and still had to pay their production costs. In 1944, the crops of more than 385,000 farmers failed on 10,297,172 acres. The figures are from the 1945 census.
On a small farm, the Farmers Home Administration estimates a farm family needs about \$1,500 gross farm income (including the value of products that are used at home and the rental value of the house) to meet expenses. This is based on studies made in 1947. This gross farm income might include about \$908 in cash and about \$558 worth of products grown for home use. The \$908 would go to pay farm operating costs of \$476 and cash family living costs of \$432.
A recent survey also shows that farmers do not carry out conservation practices under the Agricultural Conservation Program because they are not able to bear the financial burden of their share of the cost.
Minerals and better breeding may play a new role in cheaper beefsteak production.
That's the opinion of Harry Lindgren, O.S.C. extension animal husbandman, who has recently reviewed results of mineral feeding experiments conducted by the Malheur branch experimental area at Ontario. Tests carried out there indicate steers fatten faster and more cheaply on a ration containing a mineral through Lindgren points out that no hard and fast rule may be drawn from one test. Difference in breeding showed up in differences in rate of gain of animals on the same ration.
In the Malheur feeding experiment carried on by Neil Hoffman, station superintendent, and Charles Custer, feeder, four pens of eight Hereford steers each were fed the following rations: Pen one was fed chopped alfalfa, corn and bone meal. Pen two received the same without the bone meal. Pen three was fed chopped alfalfa, barley and bone meal, and pen four received the same without the mineral.
Pen three—fed chopped alfalfa, barley and the mineral supplement, bone meal—made the largest daily gain as well as the lowest cost per pound of gain, at 20 cents.
Entering the feed lot, the 32 steers included in the test averaged 880 pounds each; they weighed out at an average of 1125 pounds each, or an average gain of 245 pounds. In the top pen, number three, the lowest weight gain was put on by an animal that gained 215 pounds. The top animal gained 315 pounds. The top and bottom weight gains in pen one were 180 and 325; pen two, 135 and 280 pounds; and pen four, 160 and 280 pounds.
Lindgren points out that the difference in gain between the high and low animals indicated difference in production efficiency. Animals inherit these characteristics, hence it will pay livestock producers to spot bulls that sire the steers that make the highest and most economical feed gains.
Progeny testing work with beef animals is now being carried on at the Union, Squaw Butte, Northrup Creek and branches at the central O.S.C. experiment stations.
After the top soil is gone is too late to begin thinking about saving the soil, says Henry Baker, chairman of the Morrow County Agricultural Conservation committee. He points out that waiting for crop yields to drop and gullies to appear before carrying out conservation practices to conserve soil and water is about like calling the fire department after the house has burned to the ground.
Some land has not been ser-

CHURCHES

CHURCH OF CHRIST
John D. Runyan, minister, phone 2615.
Bible school, 9:45 a.m.; C. W. Barlow, supt, senior dept.; Beverly Yocum, supt, junior dept.

Mass in Heppner at 7:30.

Committeemen Go To FCI Meeting

Crop Insurance meeting at Pendleton Monday and Tuesday of this week. This was a meeting of crop insurance representatives from Oregon, Washington and Idaho, with the Federal Crop Insurance corporation manager, G. F. Geissler from Washington, D. C. This meeting was for the purpose of discussing the provisions of the 1949 crop insurance contract now being offered to wheat farmers and to set up plans for carrying out sales campaigns for selling crop insurance in the counties.
If you are interested in federal crop insurance contact the county office.
First evidence of white men in Oregon is the salt cairn built on the northern Oregon coast during the winter of 1805 and 1806 when the Oregon country was explored by the famous pathfinders, Lewis and Clark. The cairn, built to extract salt from ocean water, is now an historic site at the well known resort city of Seaside, 80 miles from Portland.
When U. S. Navy ships recently visited Dublin, Eire, on a goodwill tour, over 95,000 sightseers boarded them during public visiting hours.
There are eleven high waterfalls within a 11-mile section of the Columbia river highway, a short distance east of Portland, Oregon, along U. S. Route 30. The highest of these is the Multnomah Falls, which tumbles 624 feet over basaltic cliffs of ancient volcanic origin.
Oregon has more than 29 million acres of forest lands, including lake and stream surfaces, offering innumerable playlands for vacationists, according to the Oregon state highway commission travel information department.
Left over from the Lewis and Clark expedition of 1905 at Port-
