Why most telephone trouble stops before it starts

1. Imagine a vacuum cleaner in a central . . actually it's one of our important tools. For keeping equipment working perfectly means keeping equipment perfectly clean. The vacuum sucks up the specks of dust that might make a tiny electrical contact fail ... just when you need it. And we stop trouble other ways, too.

2. While you sleep this new electronic tester is at work . . . combing over circuits to see if it can spot a "leak" in the office or out on the lines. For even the best-insulated cables now and then allow moisture from rain or fog to creep in. By recording current loss on the lines, the tester checks loss of efficiency that might mean future trouble.

3. "Trouble detectives" are at work constantly, inspecting cables and lines and following up the clues given them by this testing equipment. These are just a few examples of our preventive maintenance . . . part of our job of making your telephone service dependable, ready to go to work for you when you need it . . . as often as you need it.

4. When you make a telephone call you hire a mighty valuable servant. And that servant is more useful than ever before. For the number of telephones on the Coast has almost doubled in the past ten years. We're hard at it to provide more and better service for more people. And each new telephone added makes your tele-
