Three new developments in Standard's laboratories

We picked these three developments to tell you about because they will probably never be manufactured by Standard of California.

Although we developed them, looking for ways to help some of our customers meet special problems, we expect to turn them over to other companies to produce. And this illustrates a point...

Everything we discover that can possibly benefit you is brought to you in some way... even when the development leads us far outside our own field. And when we turn up a practical way to improve a petroleum product, we make prompt use of it and, in many cases, make it available to other companies under license.

Research at Standard is a vital, progressive force. It has called for an investment of more

than \$35,000,000 in the last ten years, but its results have been immeasurable... not only in terms of better products but in the creation of new jobs and greater opportunity for our own people and those in many other industries.
