 IONE, ORE.

Seismographic crew equipment... location crew equipment... welding equipment... directional survey tools.

One hundred and thirty two men who are experts in many fields—law, geology, engineering, drilling, trucking, carpentry, derrick building, chemistry, mechanics and so forth.

One completed oil derrick with all its diesel engines, bits, fishing tools, reamers and other equipment.

Want to drill an oil well? Here's all you need

There may be oil under your backyard... but you might as well face the fact that it will take a bit of doing to find out.

The picture above shows all the men and materials needed to drill one 10,000-foot exploratory well here in the United States. Total cost will be anywhere from \$125,000 to \$1,000,000 depending on conditions encountered.

Will oil be found? Even with the best scientific help only about one out of every five exploratory wells drilled "come in."

The search for oil is a risky, expensive business, but it goes on every day in many parts of the world. In 1949 alone, we drilled 28 exploratory wells at a cost of \$6,385,000... six striking oil.

A great share of the profits of Standard of California goes back into the business in exploration of this kind... and in building new refineries, new pipelines, new storage plants and other facilities. From these come good petroleum products to serve you well... petroleum products to add still more strength to our nation in the uncertain days ahead.

STANDARD OIL COMPANY OF CALIFORNIA
 plans ahead to serve you better
