How to make good telephone service even better...

Your information operator is on the job to serve you... with numbers not listed in your directory. And smart telephone users call her only when they don't find the number they want in the telephone book. Why, they say, make two calls when one will do?

Why not keep a list of Long Distance numbers too? Wonder how many long distance users have discovered that a list of the out-of-town numbers they call can be a mighty handy thing. Saves time, you know, if you place your call by number rather than just by name and address. So, next time you call, why not jot down the number of the person you're calling when your long distance operator reports it to you... and start your own long distance number list?

Lots of people spend lots of time designing your telephone set for both beauty and efficiency. Gadgets and attachments only clutter up its clean lines... and perhaps impair its efficiency.
