An Experiment That Could Have Important Results

The beginnings of what could very possibly make a significant change, sometime in the future, in the economics of Morrow county can be seen in an article that will appear today in the Oregon Farmer. It is a progress report in a new method of wheat farming that does away with

The article, which will be in the hands of most ranchers within a few days goes into considerable detail as to experiments carried on by Washington State College on the use of nitrogen fertilizer and every-year cropping. Such farming operation is not something unheard of by our ranchers, for It is being tried out by several in this area, and many have reported a yearly crop reasonably close to the yield obtained every other year under summer fallow. According to the Oregon Farmer report on test fields in Washington, two average crops raised with nitrogen gave a total of 54 bushels, whereas the summer-fallow crop average was 32 bushels. Estimated cost of fertilizing was 10 bushels which gave a net gain for two years of 12 bushels per acre-and "that ain't hay!"

We are not qualified to enlarge on the experiments, nor do we intend to try, but we can see pretty plainly what the results could be and what. it could mean to the people and businessmen of Morrow county. Suppose the average yield in the county were increased over one-third, or, in effect, the useful acreage of the county was increased

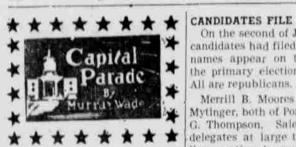

proportionately. Obviously it means there is going to be just that much more income within the area-a fact that will make every businessman's

There is another thing too, that to our idea is even more significant, and though we are just surmising, it sounds reasonable that if the system proves effective, the number of individual wheat ranches in the county will show a decided increase. Certainly we don't begrudge any farmer anything that will increase his income, but with taxes as they are-and undoubtedly will be for a good many years to come, there comes a point of diminishing returns . . . a point where the additional acreage and work connected with it does not justify the income the rancher can keep

Where that point is and when it will be reached we don't know, but it is and can be a definite reality. In fact, we've heard reports of it already from ranches where half the soil lies idle each year. When and if it all produces efficiently each year, that point will certainly be reached much

Large ranches have definite advantages, but so do large numbers of people, and anything that can make a given plot of ground support an extra other things, income tax, the make it easier to fill out income person is worthy of some careful consideration.

We believe Morrow county has a bright outlook for the coming years and such a system of full soil utilization certainly isn't going to dim that outlook one bit. True, it's still in the experimental stage, and there is much to be learned, but it looks good.

PRESIDENT SENDS CONDOLENCES

A telegram from President Truman was delivered Saturday to Walter M. Pierce, former governor of Oregon and congressman who was hespitalized in Salem two weeks ago. In part the president said, "Am sorry to learn that you are in the hospital and want you He represented Hood River county to know that I am thinking of you in the house of representatives and hope you are not having too during the sessions of 1949 and hard a time * * * take this experience in your stride."

Other features planned will be a sternwheeler race on the river, and what is hopefully expected to be the world's largest square dance, a chuck-wagon dinner of all Oregon delicacies, a morning parade through Portland and a banquet honoring the gov

ernors and stars of the film. NON-PARTISAN PRIMARY

Several granges in the state have approved a plan to change election laws to allow voters to cast ballots in any party primary they choose at the time. All yoters would receive the same ballot at the primary election instead of separate ballots naming candidates of the voter's party registration only.

The measure will be considered by all granges in the state.

AIR, AUTO DESIGN DRAMATICALLY WED IN NEW CAR

TOLEDO, O .- Here is the first picture released by Willys-Overland of its long-awaited passenger sedan, the first to be built by the company since it went into all-out production of Jeeps for war in 1942. This model, to be introduced by dealers early next year, is the "Aero Wing," so named because its construction and styling represent a "dramatic marriage of the most advanced principles of aeronautical and automotive engineering," according to company engineers. They described the car as "designed to meet the conditions of high-tax, high-cost living. It is the first time that the ride and handling characteristics of expensive, long wheelbase cars have been secured in a car of external compactness and outstanding economy." Tests cited by the company indicate the Aero Wing will, speed for speed, go farther on less gas than any other full-size car. It is reported to deliver up to 35 miles to the a lion at a speed of 30 miles an hour with overdrive using regular gasoline.

Year's Activities Reported By County Agent

As another year 'round, annual reports are the popular activity of the day at the county Agent's office reports, N. C. Anderson, Agricultural Agent. The Extension annual report has just been finished and in the mail. Annual reports of the Heppner and Boardman soil Conservation Districts will be the diversion for the next few days.

In digging through reports and records for the past year in preparing the agricultural agents annual report some interesting vide funds equal to the cost of data was found. First, for those that ask the agent why he never while salary of agents come from visits their farm, three hundred ninety five different farm-visits during the past several years cent news release on Krilium, the brand new synthetic organic thousand forty-six office calls rewere made last year, with four have been toward increased apceived. five, soil and water projects drawing two hundred twenty three farmers to the office.

Each Wednesday morning is news day with news prepared to send to seventeen different sources, radio, farm magazines and weekly farm sections of daily newspapers, with of course the weekly county newspaper reaching a goodly share of our farm people. One hundred thirty-nine different articles were released.

Right along with this method of getting information to farmers was the circular letter, with an average of six of these sent out each month. These were divided between 4-H and adult work. Another important source of agricultural information were the six thousand eight hundred thirty five bulletins distributed through the office. One thousand six hundred ninety letters were written to our farm people.

Averaging a little more than four meetings a week during the past year, one hundred fifty three were arranged by the agent, with fifty nine farm and other organization meetings attended by the

In carrying out the projects of the year two hundred nine days were spent working with adults, ninety six days with 4-H members. The time spent in the office and time spent in the field was about equal both in 4-H and adult work."

During the past year one hunderd eighty different 4-H members were enrolled in two hundred seventy five different projects. Of these one hundred eighty members, ane hundred sixty one completed their projects.

In carrying out the Extension work for 1951, the agent drove fourteen thousand five hundred thirteen miles, the greatest majority of this being within Morrow county.
