How to start engines fast in extremely cold weather

Shown above is a dash-installed primer pump designed to inject Chevron Starting Fluid into gasoline or diesel engines.

It works this way: as the operator steps on the starter, he works the pump with his hand. Highly volatile Chevron Starting Fluid goes into the engine and starts it up. Has started engines at 50° below zero!

To prevent ice formation in your fuel lines and tanks, we also recommend Chevron Ban-Ice Fluid in cold weather.

We'll be glad to fill your order for the primer pump for your equipment and, of course, see

that you have plenty of Chevron Starting Fluid and Chevron Ban-Ice Fluid all season. We emphasize service because it is the foundation of our local business!
