"Pole stubbers" at work: Inspection has revealed a pole which shows damage at the ground line. Now, reinforced with a short length, it will be strong as new, and we'll have saved much of the cost of a new pole.

LINE PATROL

How we stop telephone trouble—before it starts!

"Will it work when I want it?"—that's perhaps the most important thing you want to know about your telephone. That's what we want to be sure of, too. And that's why repairmen, testers, inspectors and many other telephone specialists are constantly at work to make sure your calls go through. The

term we use is preventive maintenance. And it simply means testing and inspecting thousands of miles of lines and cables, and checking switching equipment constantly—on foot, in trucks and electronically—to find and fix any part of our complex system which might cause future trouble.

"Trouble detective": If our electronic testing equipment spots possible line trouble, his testing devices locate the difficulty—and a repair crew is dispatched to stop the trouble before it can interrupt your service. All over our system, we are alert, round the clock, to make sure you'll have the world's most dependable telephone service.

Your telephone is one of today's best bargains

Few of the things you use in your daily life have gone up less, in these inflationary times, than the rates for telephone service. Even though our costs of providing service have skyrocketed, your telephone calls remain one of today's best buys.
