Farm Production Goals Increased For Coming Year

Farm production goals for '52 aim higher than ever.

Farmers are being asked to increase farm output sharply above that of a year ago; about 50 percent more than before World War says Harvey Miller, state production and marketing administration committee chairman. First importance in Oregon, he adds, is production of feed grain to keep pace with expanding livestock numbers.

Barley and oats are Oregon's principal feed grains. Eastern Oregon is where most of the barley is produced, but this year a shift to wheat is noticeable. Farmers there have planted about 953,000 acres of fall wheat, a 14 percent jump as compared with the year before. The state's 1952 wheat goal is 1,060,000 acres and will be met and surpassed easily unless a large acreage normally planted to spring wheat is shifted to other crops.

The state PMA committee, Miller explains, is asking for 450,000 acres of feed and malting barley with little likelihood that it will be grown. Barley seedings in 1951 totaled 362,000 acres. Miller warns that if the shift to wheat continues, the barley acreage this year will be even less

than that of a year ago.

The shift to wheat, says the bureau of agricultural economics, is being felt in the Willamette valley where twice as much wheat was seeded last fall as was the case in 1950.

On the national level, no goals are being set for livestock production because the number that can be raised is tied in directly with the prospective feed supply. The national barley goal is 290,000,000 bushels on 12,865,000 acres compared with 245,668,000 bushels harvest from 10,840,000 acres planted in 1951—a 14 percent increase over 1951 production; a 19 percent acreage increase.

Miller explains that Oregon
