Bulletin Explains Sprinkler Irrigation

Where available water is
 scant, it will go farther if ap-
 plied through a sprinkler irriga-
 tion system, authors of a new
 northwest cooperative extension
 publication, "Sprinkler Irriga-
 tion," point out.

The publication, Pacific North-
 west Bulletin number 3, is a joint
 effort of the extension services
 in Oregon, Washington and Ida-
 ho. Copies are available from
 county extension offices in any
 of the three states.

The bulletin discusses pros and
 cons of sprinkler irrigation, point-
 ing out some of its advantages
 as well as the shortcomings.
 Sprinklers, couplings, laterals,
 screening and desilting, and
 pumping plants are discussed in

some detail.
 Among advantages pointed out
 for sprinkling are: land leveling
 is not necessary; available water
 is put to better use; drainage
 problems are reduced; erosion is
 kept to a minimum; and ditches
 and ditch cleaning are eliminat-
 ed.

On the other hand, the publica-
 tion says sprinklers are high
 priced in terms of the initial in-
 vestment; power costs are con-
 tinuous; moving laterals is a dis-
 agreeable and time-consuming
 job; and wind affects water dis-
 tribution.

RHEA CREEK GRANGE

The Rhea Creek Grange will
 hold a card party Saturday, Feb-
 ruary 9, for all grange members
 and their friends. Everyone is to
 bring a pie.

BETA RAY CONTROL PANEL—Here a Gates technician studies the control panel for the new beta ray gauge installed at The Gates Rubber Company plant in Denver, Colo. The control line on his chart gives a record of the uniformity of the rubber-filled cords then being measured. Measuring is done by a radioactive beam which passes through the cords.

HOW TO SELL YOUR RANCH

Write for free information on the new method that brings results—one ranch sold EVERY TWO DAYS last month by our organization. With nearly 100 branch offices throughout the West, we offer you ACTION backed by the largest national advertising campaign ever developed to bring BUYERS to your ranch. Write today for information on our organization—no obligation.

Atom Harnessed For Tire Manufacture

The long wait for the harnessing of atomic energy has ended, according to James Farley, who announces today that tires now in his stock and produced by The Gates Rubber Company, Denver, Colorado, contain rubber-filled tire cords that are scientifically weighed and measured by a tiny piece of radioactive material.

The miracle material is a particle of Strontium 90, no bigger than the head of a pin, and a by-product of the atomic furnaces at Oak Ridge, Tennessee.

It is being used by Gates to gauge the weight and density of rubberized cords used in Gates Tires—to an accuracy of .001 pound per square yard—as the fabric moves by in the production process.

Gates officials point out that this more accurate measurement makes possible finer quality tires and other rubber products.

EEZE FLOW FERTILIZER SPREADER

For spreading all kinds of Commercial fertilizers, for seeding grasses and small grains, for seeding and fertilizing at the same time.

Here's A Tip On Gasoline Quality

Some gasolines are refined to stress one or two special features... at the expense of others. No gasoline gives you all-around performance unless it has 8 important qualities... 8 that make Chevron Supreme:

- Area-blending quality
- Mileage quality
- Power quality
- Anti-knock quality
- Vapor-lock prevention
- Starting quality
- Warm-up quality
- Acceleration quality

And because Chevron Supreme does have these 8 essential qualities, it's better balanced and thus more dependable under any conditions, anywhere in the West.

Give us a call today. We'll see that your bulk tanks are filled promptly. Judge for yourself what a difference Chevron Supreme Gasoline makes in your driving.
