be well to keep in mind that with the tightening of beef cattle prices our ranchers are going to buy only the best quality bulls for the least money. This calls for castrating any that do not show promise of getting in to a two or a higher grade.

Tempting, cooling drinks are a natural part of the hot weather pic-

ture. A tail refresher is the first thing the hostess thinks of when a neighbor drops in for a chat or when invited guests arrive. It's the per-fect aid to relaxation when you sit down for a restful hour after household tasks or a round of sports.

To meet the demands and suit every taste, it is well to have a variety of bottled drinks cooled in the refrigerator. Pale dry ginger ale and sparkling water, refreshing by themselves and blending well with fruit juices for drinks to please the individual taste should be on hand.

For those who like a dry drink with a slightly bitter taste, haunting and pleasant, you might include Quinac (quinine water). There is something especially cooling about a glass of well-iced quinine water, and that is not surprising for the drink originated in the tropics where intense heat necessitates a beverage that really cools the blood. It is fast becoming a popular summer cooler in our country.

Quinae Cooler Place three or four ice cubes in a tall glass and fill the glass with quinine water. Add a teaspoon of lemon or lime juice and garnish with a slice of the fruit.

Here is a refresher made with fresh pineapple:

Fresh Pineapple-Lime Sparkle

<sup>3</sup>/<sub>4</sub> cup lime juice <sup>3</sup>/<sub>2</sub> cup freshly grated pineapple <sup>3</sup>/<sub>2</sub> cup sugar syrup Pale dry ginger ale Combine lime juice, sugar syrup and pineapple. Divide among 4 tall glasses. Add ice cubes and fill glasses with pale dry ginger ale.

State college it was found that been had by working on farm like this. #### **OSC** Agronomist Gives Advice On Hay Drying

Poor haying weather has caught many Western Oregon farmers in the position of storing hay before it is fully cured, says Harry Schoth, Oregon State college farm crop agronomist. Continued unseasonal weather

could still threaten harvests of etch and oats scheduled to come off before mid-July and the second alfalfa cutting later in the month.

Schoth says hay spoilage and

urial compounds are poisonous and need to be kept away from children and pets.

Have you picked out a good experimental trial at Oregon mind that many an accident has frequently, especially in a year mixture. Applications to diseased crop cutting is generally of good

various slime molds. Many of these come earlier in the season, the summer blight being the troublesome one now. All of these diseases are most readily controlled by the application of organic and non-organic mercury compounds available in the cheapest most practical forms at seed and drug stores under vari- ous trade names. Calomel (Mercurous Chloride) and corrosive sublimate (Mercu- ric Chloride) are the two most widely used non-organic mercury compounds. They can be pur- chased at drug stores. Proprietory compounds for lawn disease con- trol should be applied according to the directions on the packages. The corrosive sublimate, Calomel mixture, is applied at the rate of one ounce of each material in ten gallons of water to cover 500 square feet of lawn. This can be applied evenly with a garden sprayer or sprinkling can. Cor- rosive sublimate disolves readily in warm water. Calomel does not disolve in water so the spray solution should be stirred fre-
