Hormone Injections **Boosts Beef Gains** In OSC Experiments

mone, testosterone, into beef animals have brought faster and cheaper gains in tests at the Oregon State College agricultu-

ed heifers. Animals that receive the hornone shots also require less feed in total digestible nutrient (TDN) to put on 100 pounds of gain. Treated helfers took only TDN to pounds while untreated helfers ate 507 pounds TDN for each 100 pounds gain. Treated steers ate 365 pounds TDN while unfreated steers needed 430 pounds TDN

per 100 pounds of gain. Testosterone-treated animals produced more protein and less fat. Dr. Bogart explained that the treated cattle continued to grow beyond the point where growth usually swings over to fat pro duction. Most treated and un

The OSC geneticist believes the growth increase is the result of formone stimulation of the pitultary gland which, in turn, steps up thyroid activity that regulates

Several questions remain un answered. A more practical method of administering the hor mone than the weekly injection

Injections of the male horral experiment station.

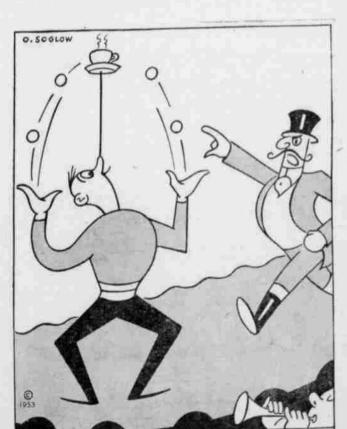

Dr. Ralph Bogart, geneticist in the Osc animal husbandry de partment, reports that steers receiving the hormone injections gained about three tenths of a ound more a day than untreat ed animals. Heifers did even better, gaining over one-half pound a day more than untreat-

treated cattle graded choice.

An OSC taste panel found no difference in taste between treat ed and untreated animals, al though they did note some loss of tenderness in meat from treat-

ed steers.

New word for "TTDYNAFLOW!"

We'll get right to the point.

The comments we've been getting from many new Buick owners about the new Twin-Turbine Dynaflow are terrific.

And the reason is-this fully automatic transmission is, in itself, terrific.

It has a new, firm, solid "take-hold"gives you instant getaway response.

It has new quiet - you can barely hear the acceleration build-up.

It has unique and utter simplicity of operation. You just move your Selector into Drive range, press the pedal, and go. That's all.

But the sweetest thing of all about TT Dynaflow is its smoothness.

You move from standstill to your legal speed in one progressive build-up of power delivery.

You feel a constant "carry" of forward motion, unbroken in any way-because here no gearshifting takes place, either manually or automatically.

Even your deceleration is infinitely smooth and gradual, with the cushioned control of flowing oil slowing down.

Wouldn't you like to sample this wonderful new getaway and pleasant quiet and immaculate smoothness?

We'll be glad to seat you at the wheel of a new 1953 Buick with Twin-Turbine Dynaflow-and let the thrills come where they may. Drop in soon, won't you?
