Don't get your guests in an uproar, Pa... it'll be a bully barbecue if there's plenty of cool, cool Blitz. Just wrap your company around a mellow, better-tasting Blitz and your party won't go to the dogs. When you barbecue, you're really cooking with charcoal if there's plenty of the better beer... so better buy Blitz!

Blitz Weinhard Fine Beer Since 1856
A Product of Oregon's Own and Only Brewery... Blitz Weinhard Company... Portland, Oregon

AS GENERAL ELECTRIC SEES IT...

The atom will produce power for homes in 5 to 10 years

Full-sized plants will generate electricity from atomic energy without government subsidy

Protective plastic suit enables technicians to work safely. 12,000 G.E. employees are assigned to atomic projects.

Biggest question in producing electricity with atomic energy has not been: Can it be done?—but: How can it be done economically on a full-scale basis so that many areas and many people can benefit?

America is now very close to a practical answer.

We already know the kinds of plants which will be feasible, how they will operate, and we can estimate what their expenses will be. In five years—certainly within ten—a number of them will be operating at about the same cost as those using coal. They will be privately financed, built without government subsidy.

Developing the right fuel element is still a problem, but the Atomic Energy

Commission, General Electric scientists and other experts are all working on a solution. And real progress is being made.

Atomic power plant of type developed by A. E. C.'s Argonne National Laboratory. Fissionable material serves as fuel to produce steam which powers turbine. For more information from General Electric's Atomic Power Study, write Department W, 2-123, Schenectady, New York.
